About This Report

Report Overview

This is the fifth Sustainability Report published by HWASHIN Co., Ltd. (hereinafter “Hwashin”). Hwashin publishes sustainability reports annually to transparently disclose to stakeholders its activities and outcomes for the achievement of sustainable management goals for the past year and to solicit opinions through communication with a broad base of stakeholders.

Reporting Standards

This report was prepared consistently with the core methods for the publication of sustainability reports. Financial information was prepared on a consolidated basis, while the reporting standards and definitions adhere to the Korean International Financial Reporting Standards (K-IFRS) and the Global Reporting Initiative (GRI) Standards 2021. Energy usage and carbon emissions volume disclosed herein are verified results. Any major changes were separately noted in the relevant sections.

Reporting Period and Scope

This report covers the major activities pursued and achievements made by Hwashin from January 1 to December 31, 2024. Some of the qualitative activities also include content that took place in the first half of 2025. Quantitative data include the performance results of the past three years (2022–2024) to display trends by year. The reporting scope covers all Korean business sites (Eonha Plant, Technology Research Center, Bongdong Plant, Yesan Plant, Pyeongchon Advanced Research Center, High-Tech Park Plant, and Maeho Plant). Depending on the size and nature of each site, some may have been added or excluded; any such exceptions are noted with separate explanations where necessary.

Report Verification

This report is published after a thorough review by Hwashin’s Environmental, Social, and Governance (ESG) Planning Team. The financial information in the Report is data verified in an audit by Samduk Accounting Corporation, an independent auditing firm. Other information in the Report was collected from the cited sources. Additionally, a third-party verification was undertaken by Lloyd’s Register Quality Assurance (LRQA), an independent outside assurance and certification service. For the verification statement, see APPENDIX.

CEO Message

Dear valued stakeholders,

Thank you for your unwavering support and unfailing trust.

In 2024, the global supply chains faced heightened uncertainty due to high inflation, rising interest rates, and escalating trade tensions among nations. Despite these challenging business conditions, Hwashin has strived to work alongside our stakeholders to build a better future and take another step forward as a sustainable enterprise.

First, we laid the foundation for embedding ESG management into our operations.

We established teams dedicated to each ESG area and drew up company-wide implementation strategies to enhance ESG management. Through these efforts made, we aimed to fully integrate ESG as a key component of our company-wide management.

Second, we joined the United Nations Global Compact (UNGC), a global sustainability initiative.

By doing so, we internationally declared our commitment to the 10 principles in the areas of human rights, labor, environment, and anti-corruption. This marks a symbolic milestone that reflects Hwashin's strong determination to fulfill its social responsibilities as a global corporate citizen.

Moving forward, Hwashin will continue to strengthen ESG management with a focus on the following three areas:

First, we will concentrate our efforts on actually reducing greenhouse gas emissions, including the use of renewable energy and the management of Scope 3 emissions.

Second, we will build a sustainable ecosystem for shared growth by assessing and improving ESG risks among our suppliers and fostering mutually beneficial cooperation with the local communities.

Third, we will pursue responsible management that earns trust through data-driven ESG information management and transparent disclosure.

Sustainability is no longer a choice but a must for a company's survival.

Hwashin will continue to upgrade its ESG management based on innovation, responsibility, and trust, boldly taking on challenges for a sustainable future.

We kindly ask for your continued interest and unfailing support.

Thank you.

Chief Executive Officer, Hwashin
Chung Seo-jin

Company Profile

Company Overview

Over 50 years ago, Hwashin set out alongside automakers with the bold vision of “becoming a global leader in the 21st-century automobile parts industry,” in a country with no automotive industry at the time. Despite countless challenges, Hwashin has grown into a global company specializing in automotive parts thanks to our unwavering determination and efforts made. By developing new technologies through creative research, Hwashin has played a pivotal role in advancing Korea’s automobile parts industry. With an enterprising spirit of challenge taking and superior technological capabilities, the company has built a state-of-the-art information system thanks to which we are advancing into the world with an advanced competitive edge.

Appendix

ISO 14001 Environmental management system

We have made environmental management a cornerstone of corporate management and are making strides toward continuous improvement of the environment by setting specific targets and processes.

ISO 45001 Occupational health and safety management system

We are taking the lead in preventing disasters by setting safety and health goals and building systems for workers' safety and health in the workplace.

IATF 16949 Automotive management system

We apply a quality system capable of application to any supplier in the global automobile industry supply chain to achieve continual improvements, prevent defects, and reduce waste.

Designated as a leading company in energy efficiency innovation

We are working to transform our energy consumption structure into a low-consumption, high-efficiency model to reduce energy costs and greenhouse gas emissions.

Award for supply payment linkage system

We received the Korean Minister of SMEs and Startups Award for our contributions to the spread of the supply payment linkage and mediation and consultation systems for suppliers.

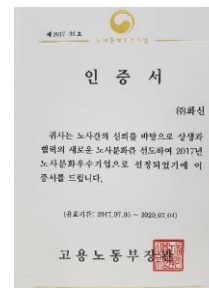

Fair Trade Commission Chairperson Award

We were awarded by the Chairperson of the Fair Trade Commission for six consecutive years, recognized for establishing a fair trade order through fair trade agreements and promoting a culture of coexistence and cooperation.

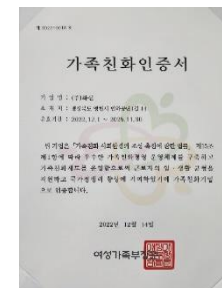

Presidential Root Industry Award

We share a future vision of our achievements with a stronger competitive edge in materials, parts, and equipment, and in root industries, and thereby contribute to national industry development.

Certified for corporate excellence in labor- management culture

We were selected and certified as a model company for the practice of a symbiotic labor-management culture for the spread of a cooperative labor-management culture and stronger corporate competitiveness.

Family-friendly certification

We were recognized and certified as a model company for the operation of systems, including support for childbirth and childcare, flexible work, and the formulation of a family-friendly corporate culture.

Business Portfolio

Business Overview

As a global automotive parts company, Hwashin specializes in chassis and body parts that play a key role in enhancing vehicle durability, driving stability, and fuel efficiency through research, development, and production. In particular, we contribute to the mass production of eco-friendly, high-efficiency vehicles by delivering optimized designs that meet customer needs using high-performance, high-strength, and diverse materials. In addition, in keeping with the paradigm shift from conventional internal combustion engines to eco-friendly mobility, we are developing and mass-producing battery pack cases that store the battery carrier modules in electric vehicles—a key energy supply module—which have been recognized for their technical excellence. Hwashin is currently focusing its capacity on developing high-strength lightweight parts, electric components, and smart parts to preemptively respond to the future vehicle market and secure the technological competitiveness needed to lead the next-generation mobility era. Moving forward, Hwashin will continue to grow as the optimal partner that meets customer needs in the ever-evolving global automotive market based on sustainable innovation and customer-centric quality management.

[View of HWASHIN Technology Research Center]

[Newly Developed Products]

AL FRONT CROSS MEMBER

- A part for lightweight suspension in electric vehicles
- It is made lightweight to improve mileage.
- It supports electric motor, steering mechanism, and suspension system.
- It improves ride comfort by reducing road vibration and shocks.

BATTERY PACK CASE

- Storage of the carrier module, the energy source for electric vehicles.
- Installed on the underside of the vehicle, it protects the battery from road debris, water ingress during rain, and external impacts, thereby safeguarding the driver from potential fire or explosion.

Business Portfolio

Main Products Overview – CHASSIS

FRONT CROSS MEMBER (#) TYPE

- It supports the engine and connects the axle and the frame.
- Arm type, steering gear box, and stabilizer bar
- It dampens vibrations and suppresses noise from the road surface or powertrain.

REAR CROSS MEMBER (#) TYPE

- It is designed as an independent suspension using 3 to 5 links to ensure the tires remain perpendicular to the road surface.
- It plays the role of fastening and supporting components such as arms and the stabilizer bar, which are mounted at the rear of a vehicle and form part of the suspension system.

FRONT CROSS MEMBER (H) TYPE

- It supports the engine and connects the axle and the frame.
- It fastens and supports components, such as arms, steering gear box, and stabilizer bar.
- It dampens vibrations and suppresses noise from the road surface and powertrain.

REAR CROSS MEMBER (H) TYPE

- It supports the engine and connects the axle and the frame.
- It fastens and supports components, such as arms, steering gear box, and stabilizer bar.
- It dampens vibrations and suppresses noise from the road surface and powertrain.

FRONT LOWER ARM

- It supports frontal, dorsal, lateral, upward, and downward forces transmitted through the tires during driving and prevents abnormal movements.
- It dampens or mitigates vibrations generated by the cross member and knuckle.

REAR CTBA

- It is installed on the rear wheels of a vehicle to absorb shocks during driving caused by information entered on a road, maintaining stability when cornering.
- It is lightweight, compact, and highly maintainable.
- It boasts of excellent roll and lateral stiffness.

REAR LOWER ARM

- It supports lateral, frontal, dorsal, upward, and downward forces transmitted through the tires during driving and prevents abnormal tire movements.
- It dampens or mitigates vibrations generated by the cross member and knuckle.

REAR TRAILING ARM

- It is mounted on the lower rear section of a vehicle and assembled on the rear cross member and carrier.
- It absorbs external forces applied to the tires through upward and downward movements, improving ride comfort.

Business Portfolio

Main Products Overview – CHASSIS

REAR ASSIST ARM

- It connects the rear wheel carrier and the cross member.
- It affects the vehicle's lateral stiffness and high-speed cornering stability.

FRONT UPPER ARM

- It is mounted on the lower rear section of a vehicle and disperses the load during tire movement and functions as an upward and downward link.

REAR AXLE HOUSING ASSEMBLY

- It is used in rear-wheel drive axle-type suspensions.
- It is installed on the final reduction gear to house the drive shaft and transmit axial loads from the shaft to the vehicle frame.
- It is a component mounted on 1-ton or larger commercial vehicles.

PEDAL

- It is a device that controls vehicle acceleration and braking and disconnects the engine power during gear shifting and manual transmission.
- It consists of an accelerator pedal, braking pedal, and clutch pedal.

FUEL TANK

- It is mounted on the rear floor of a vehicle and primarily supplies fuel to the engine and blocks fuel flow noise generated during vehicle operation.
- It is composed of a canister that captures evaporating gas and a fuel pump module that delivers fuel to the engine.

Business Portfolio

Main Products Overview – BODY

REINF SIDE OUTER

- It is a component that reinforces the side stiffness of a vehicle and enhances the stiffness in the event of a side collision.
- It has mounting points on the front and rear doors.

FENDER APRON & MEMBER

- It is mounted above the left and right front wheels of a vehicle.
- It fastens and supports the shock absorber, which helps mitigate and dampen road surface vibrations and shocks.

CENTER FLOOR

- It connects the left and right sides of a frame and fastenes various cables, including the parking cable.

REAR FLOOR

- It forms the floor structure of a vehicle and reinforces the overall vehicle stiffness.
- It serves as a mounting point for suspension and driving components such as a cross member and transmission.

COWL COMPLETE

- It serves as a partition between the engine room and a vehicle's interior/exterior and provides connection points for the engine hood and front doors, as well as a drainage channel.

COWL CROSS BAR

- It is a frame installed in the cowl area to prevent lateral twisting or bending and enhance stiffness.
- It maintains structural strength to protect the passengers in the event of a collision.

BUMPER RAIL

- It connects the front bumper and vehicle.
- It is a component that absorbs shocks and fastens products mounted at the front of a vehicle.

SUN ROOF REINF

- It provides a guiding surface to install a sunroof for opening and closing the vehicle ceiling.

Business Portfolio

Research and Development (R&D)

In August 1987, Hwashin established its corporate research institute, the “Hwashin Technology Research Center,” with the aim of strengthening its future competitiveness. Since its founding, the center has pursued long-term R&D strategies of securing outstanding talents and building state-of-the-art computer systems and testing equipment. The Hwashin Technology Research Center focuses on the development of cutting-edge technologies in areas such as new process technologies, new materials, and new innovative engineering. Through joint research with industry-academia-research collaboration and the execution of government-funded projects, it continues to contribute to the technological advancement of the sustainable mobility industry. In addition, the company actively promotes specialized training and capability building of its researchers, dedicating efforts to cultivating expert R&D personnel. The research center is structured into specialized teams across various fields, including product designing, computer-aided analyses, advance research, testing, prototyping, manufacturing process designing, and the development of mold processing technologies. These specialized teams enhance the research capacity across the entire product development lifecycle. Building on its accumulated technological expertise, Hwashin plays a pivotal role in developing automobile parts technologies that will lead the next-generation vehicle era of the 21st century. Hwashin will continue to enhance its sustainable R&D activities that encompass both eco-friendliness and technological innovation.

Key Research Facilities and Equipment

Hwashin possesses state-of-the-art research infrastructure that supports the entire R&D cycle—from product design and analyses to prototyping and testing. Key facilities include a robot welder, 3D measuring machine, static load tester, and a Noise, Vibration, and Harshness (NVH) tester. These enable fast and precise execution of a wide range of development activities, including prototyping, precision measurement, structural analyses, and noise and vibration assessment.

[R&D Areas]

Research

R&D for new technologies, analyses of new technological trends, R&D road map planning, executing government-funded projects, and patent management

Design

Designing mass production, product benchmarking, design automation, optimization design, and on-site design support for clients

Analyses

Dynamic analyses, structural and durability analyses, forming analyses, flow analysis, and collision analyses

Initial Development

Planning prototyping, die manufacturing and try outs, jig manufacturing and try outs, 3D scanning measurement, checking formability and weldability

Testing

1/2 car durability testing, static load fatigue testing, collision performance testing, combined environmental testing, prototype manufacturing

[Testing Lab]

[Prototyping Lab]

Strengthening R&D Capabilities

Hwashin holds an R&D Tech-Conference every year to spread an R&D culture and strengthen its technological competitiveness. This event brings together experts in the automotive industry to share the latest technological trends in the automobile parts industry, as well as case studies on the application of new technologies, processes, and materials. Through this, Hwashin aims to build its in-house R&D capacity and strengthen technical collaboration with its partner companies. On October 31, 2024, the 11th R&D Tech-Conference was held, featuring presentations on key research topics, such as the development of an electric vehicle platform incorporating a dual front-rear drive solution, design and analyses of automation technologies for digital twins, battery pack lightweighting, as well as the sharing of updates on solution development for responding to next-generation mobility. Through this, the event created synergistic effects of helping boost employees' motivation for R&D and strengthening technological competitiveness based on coexistence and cooperation with our stakeholders.

[11th R&D Tech-Conference]

State of Patents

Hwashin is continuously advancing its intellectual property acquisition and management system as a key asset to enhance its technological competitiveness. In particular, the company systematically promotes company-wide patent creating activities and focuses on the commercialization of its R&D achievements made and the protection of its proprietary technologies by securing rights for outstanding technologies. As a result, as of 2024, Hwashin holds a total of 253 registered patents and 69 patent applications. In addition, the company annually holds a patent evaluation council meeting to reward R&D outcomes and link them with the personnel system (including promotions) to encourage the active participation of its employees in patent creating activities.

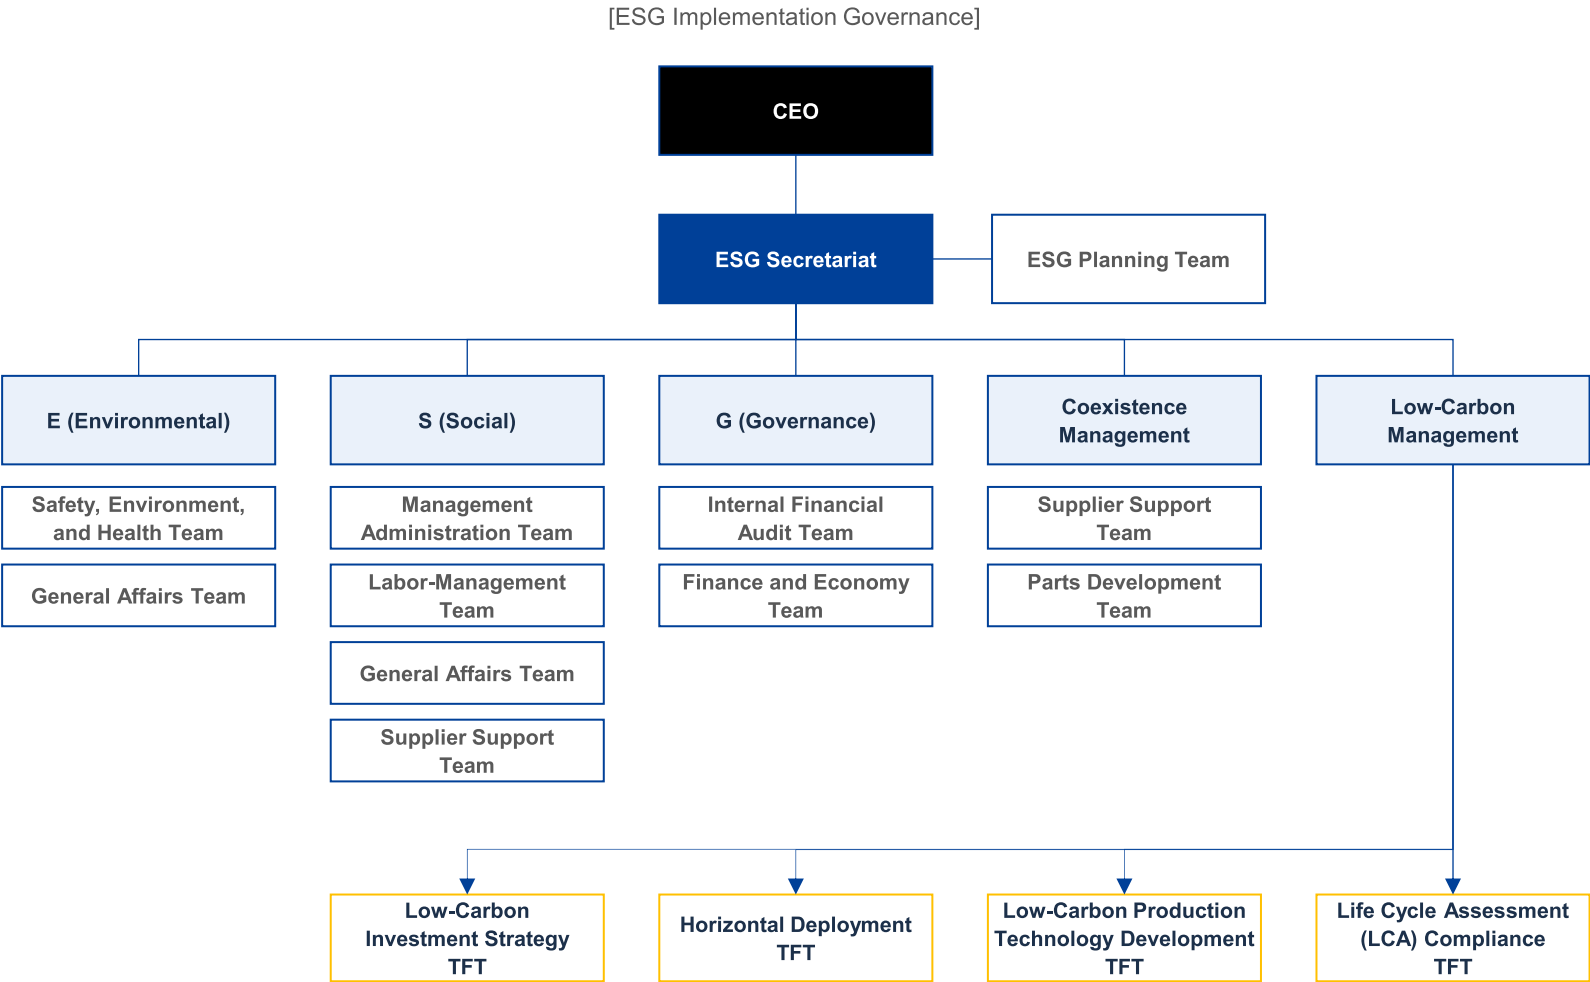

[State of patents]

ESG Management

ESG Implementation Governance

Hwashin has established dedicated teams for each ESG area and assigned specific roles to embed ESG management into its organizational framework. Through this structure, the company aims to proactively manage ESG-related risks and respond flexibly to the rapidly changing external conditions.

Stakeholder Engagement and Distribution of Economic Value

Hwashin seeks to maintain sustainable relationships with its key stakeholders—shareholders and creditors, employees, suppliers, government, and local communities—by distributing the economic value generated by the company fairly and responsibly. In 2024, based on consolidated financials, Hwashin recorded KRW 1.7123 trillion in sales, KRW 65.3 billion in operating profit, and KRW 53.6 billion in net profit for the current period. This marks a year-over-year decrease caused by a decline in domestic OEM sales, reduced sales of goods to corporate customers, and weakened profitability of major subsidiaries. Nevertheless, despite these challenges, Hwashin has continued to carry out various forms of value return activities—including dividends—as part of its social responsibility to uphold the value of shared growth. Moving forward, Hwashin will continue to share the profits it generates with its stakeholders, thereby building a virtuous cycle of sustainable growth.

[Distribution of Economic Value]

	Contributions	171	268	630

Materiality Assessment

Conducting Materiality Assessment

Hwashin performs materiality assessments to derive key ESG issues that should be prioritized and disclosed from the perspective of sustainable management. The results are then integrated into the company’s business strategy. The materiality assessments consider both the actual and potential impacts of Hwashin’s business activities on the environment and society, as well as the risks and opportunities these social and environmental factors pose to the company’s financial performance to identify critical issues. The company annually incorporates feedback from key stakeholders, such as the employees and suppliers, as well as industry trends, global ESG requirements, and regulatory changes to evaluate the importance of ESG issues. Through this process, the company then sets the priorities. The identified critical issues are integrated into Hwashin's ESG strategy and execution plans, as well as aligned with its management decisions and risk response activities, thereby forming the core foundation for the company’s sustainable business operations. Moving forward, Hwashin will continue to conduct regular materiality assessments to clearly grasp the expectations of various stakeholders and societal demands, and reflect the results to best practice responsible ESG management.

Environmental, Safety, and Health (ESH)

Hwashin has established and operates an ESH management policy for its sustainable development. Through this, Hwashin demonstrates the commitment of the CEO and all employees to environmental improvement and preservation, the creation of a safe working environment, and the promotion of employee health. Additionally, Hwashin prioritizes the management of key ESG activities, such as improving environmental management and waste reduction. Key performance indicators (KPIs) are set annually for the reduction activities, as well as the management of air and water pollutants, and the outcomes are linked to the evaluation and compensation of employees, thereby encouraging their more proactive participation.

Linking ESH Performance with Employee Compensation

Hwashin annually establishes KPIs based on the ESH management policies and sets specific implementation tasks. Upon achieving these goals, the performance is linked to the evaluation and compensation of its employees. By connecting these achievements to employee compensation, Hwashin promotes long-term success and sustainable management.

Task Name	KPI	2024 Target
Achieving zero accidents (Hwashin and suppliers)	Number of major accidents	0
Company-wide activities to reduce carbon emission*	Reduced amount	437 tCO2eq
Establishment of an ESG management system	Customer safety evaluation score	75 points or higher

* This task was designated as a cross-departmental initiative and has been linked to the performance evaluation and compensation of the relevant department head (executive).

Environmental Management Policies

To minimize the environmental impact that may arise across the entire value chain, Hwashin requires all its internal and external stakeholders—including employees, suppliers, and customers—to perform their duties in accordance with its environmental management policy.

Environmental Management Policies

1

We recognize the environment as a core success factor of the company and create corporate value through proactive environmental management.

2

Hwashin actively strives for the sustainable use of resources and energy, as well as the reduction of pollutants, throughout the entire process of product development, production, sales, use, and disposal.

3

We conduct environmental training for all employees and dedicate efforts to social contribution activities.

4

We comply with Korean and international environmental laws and agreements, work toward promoting and improving environmental management, and communicate the results internally and externally.

Scope of Application of Environmental Management Policies

1

Employees of the headquarters, subsidiaries in Korea and globally, and affiliates perform their duties in accordance with the environmental management policies.

2

Additionally, employees must encourage the suppliers, including partners and customers, to adhere to these environmental management policies when interacting with them.

Environmental Management System

1

Hwashin has established a system to continuously improve the environment by defining the organization, processes, and specific goals, and efficiently allocating the resources for their organized management.

2

The company strives for eco-friendly design and thorough environmental impact assessments throughout the entire process, while also implementing and continuously improving processes for developing technologies such as data construction and environmental performance certification to optimize environmental costs.

3

By establishing and operating ISO certification systems in all the plants in Korea and globally, Hwashin continuously improves the working environment, enhances emissions reduction, and improves energy efficiency by upgrading the environmental facilities.

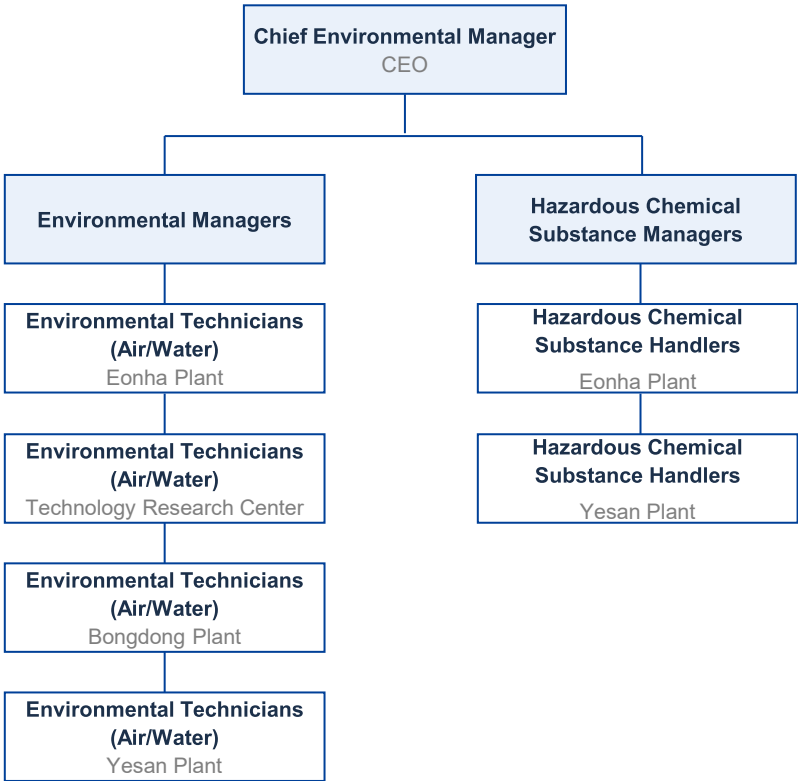

4

We comply with Korean and international environmental laws and agreements, work toward promoting and improving environmental management, and disclose the results internally and externally.

Environmental Management

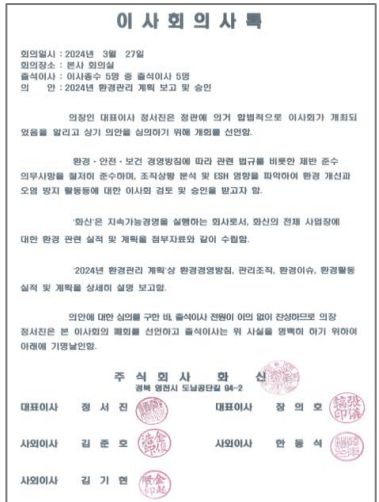

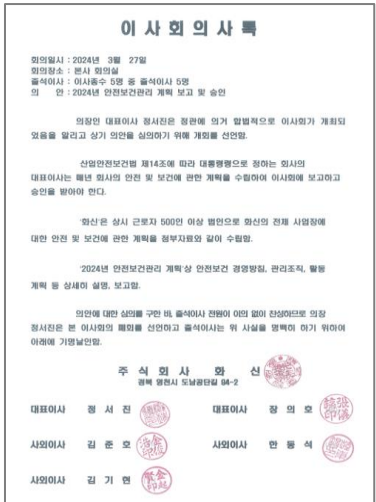

Environmental Management Organization

Hwashin manages company-wide environmental regulations, risk management, and pollutants by appointing environmental managers, technicians, and hazardous chemical substance managers under the CEO's leadership as the chief manager of the environment, thereby ensuring a more systematic operation of its environmental management system. The company clearly assigns roles and responsibilities to the person responsible for environmental management in each plant for swift and effective response to environmental issues.

Board of Directors' ESG Review

Hwashin is continuously strengthening its Board of Directors-level review and decision-making system to internalize ESG management. The response directions and key strategies for important ESG issues are decided through the Board's review and resolution, with ESG agenda items regularly presented for discussion. The Board has institutionalized regular reports on ESG-related policies and activities, evaluation results, improvement plans, and key risks and opportunities. In particular, its discussions have focused on core topics, such as strategies to respond to climate change and occupational safety management. Additionally, the ESG Secretariat analyzes key ESG issues in advance and prepares materials to report to the Board in consultation with relevant departments, thereby supporting the Board in making strategic decisions. In the future, Hwashin plans to establish an external training and advisory system to strengthen the Board's expertise in ESG matters.

Environmental Management

ISO 14001 (Environmental Management System) Certification

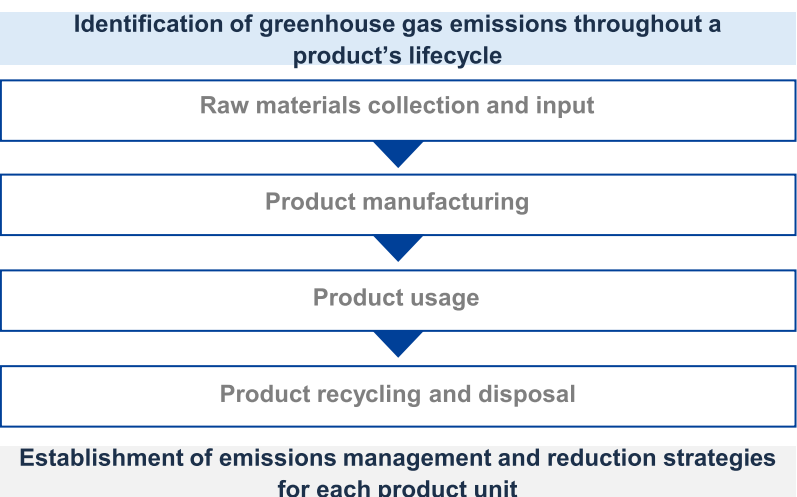

Hwashin has acquired ISO 14001 certification for its five plants in Korea to establish and maintain an environmental management system that aligns with international standards. Through this, Hwashin has established a systematic environmental management system that sets environmental policies and goals, as well as enables the early identification of and proactive response to key environmental risks. Additionally, Hwashin not only identifies risks, but also continuously monitors issues where improvements and actions have been completed to manage environmental accidents and legal risks. Moving forward, Hwashin will continue to maintain ISO 14001 certification to thus enhance its friendly relationships with customers, the public, and local communities. The company will further strive to fulfill its social responsibility by sharing solutions to environmental problems and promoting development through related activities.

Certified Plants

High-Tech Park Plant	

Conducting Life Cycle Assessments (LCAs)

In response to tightening supply chain carbon regulations, Hwashin is conducting LCAs to minimize its environmental impact. LCA is a method for quantitatively analyzing and evaluating the environmental impact of a product throughout its entire life cycle, from raw materials collection to its production, usage, and disposal. Hwashin annually calculates the environmental load of items such as energy, utilities, and gases. Based on the results of the analyses, the company establishes improvement measures and strives to meet the requirements for reducing environmental impact. Additionally, starting in 2023, Hwashin has established an internal LCA Task Force Team (TFT) to conduct product LCA analyses for the vehicle models specified by its customers each year. In the future, Hwashin plans to enhance its product LCA system by developing programs that include internal LCA methodology training, building LCA systems for suppliers, and providing support to build their LCA capacity.

Environmental Management

Emergency Response Training

Hwashin has established emergency response regulations to quickly and proactively respond to environmental emergencies, prevent environmental pollution, as well as minimize human and property damages. Additionally, departments handling hazardous and risky facilities or materials prepare department-specific emergency training plans and conduct regular simulation drills based on hypothetical scenarios to develop the capability to effectively respond to similar situations.

① Identify scenario before training

③ Communicate emergency situation

⑤ Conduct emergency contact / report the incident

② Press pinching accident (simulated)

④ Assess condition of the injured

⑥ escort the ambulance

Environmental Training of Employees

Hwashin operates various training programs to ensure that employees recognize their environmental responsibilities and have the ability to practice them. In 2024, the company conducted training for environmental technicians, hazardous chemical substance managers, and the substances' direct handlers for the legal specialists among them to improve their practical capacity to improve the environment. Company-wide, Hwashin shared its key 2024 policies for environmental safety, Korean and international carbon reduction regulations, the corporate response strategies, as well as major amendments to the Chemical Substances Control Act of Korea, through the company-wide bulletin board.

Training	Frequency (Time)	Number of Trainees				
		Eonha Plant	Technology Research Center	Bongdong Plant	Yesan Plant	Total
① Environmental training	Monthly	Shared through company-wide bulletin board				
② Training for workers engaged with hazardous chemicals	2 hours / year	515		N/A	135	650
③ Environmental technicians training	1 session / 3 years	2	1	-	2	5
④ Hazardous chemical managers training	1 session / 2 years	-	N/A	N/A	2	2
⑤ Training for handlers of hazardous chemicals	1 session / 2 years	3	N/A	N/A	-	3

[Training for workers engaged with hazardous chemicals]

[Training for handlers of hazardous chemicals]

[Environmental technicians training]

Responding to Climate Change

Mid- to Long-Term Road Map

As part of its strategies for the global response to climate change and building a sustainable supply chain, Hwashin has established mid- to long-term greenhouse gas emissions reduction targets. Accordingly, Hwashin has set the goal of reducing its greenhouse gas emissions by 25% by 2030 using 2019 as the baseline year. This goal applies to all Hwashin's facilities in Korea (Eonhaa Plant, Technology Research Center, Bongdong Plant, Yesan Plant, Pyeongchon Advanced Research Center, High-Tech Park Plant, and Maheo Plant) and covers both Scope 1 (direct emissions) and Scope 2 (indirect emissions). To achieve this greenhouse gas emissions reduction goal, Hwashin is implementing energy efficiency improvements in its production processes by introducing highly efficient equipment, optimizing processes, and applying waste heat recovery systems. The company is also planning and executing various strategies for reduction, including researching low-carbon technologies and reviewing conversion to renewable energy. Moving forward, Hwashin will not only aims to achieve its 2030 reduction goal, but also strives to realize a long-term Net-Zero vision, thereby contributing to the transition to a sustainable low-carbon society.

[Greenhouse Gas Emissions Forecast]

(Unit: tCO2eq)

Type		2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030
Actual Emissions	Scope 1	3,211	3,314	3,819	4,094	4,234	4,145	4,214	4,282	4,351	4,420	4,488	4,558
	Scope 2	13,705	14,595	15,650	16,018	16,383	16,606	16,881	17,157	17,432	17,707	17,983	18,258
	Total	16,916	17,909	19,469	20,112	20,617	20,751	21,095	21,439	21,783	22,127	22,471	22,816
Target Reduction Amount								623	2,659	4,526	6,394	8,261	10,129
Target Emissions								20,472	18,780	17,257	15,733	14,210	12,687

Note 1) Historical emissions data have been revised based on third-party verification, and may differ from figures reported in the previous year's report.
Note 2) Emissions up to 2024 are based on actual data, whereas emissions from 2025 onward are projected.
Note 3) Baseline year emission (2019): 16,916 tCO2eq
Target year emission (2030): 12,687 tCO2eq – a 25% reduction compared to 2019 emission

Responding to Climate Change

Computation of Greenhouse Gas Emissions

Hwashin systematically manages and reduces greenhouse gas emissions by calculating and verifying emissions for Scope 1 and 2 categories every year. To do this, Hwashin systematically tracks and manages data on energy consumption, utilities, and gases. The collected data are reviewed internally, and the greenhouse gas inventory is updated once annually. We are shoring up data credibility on greenhouse gas emissions through third-party verification by an expert body. Organizational boundaries were assessed based on six plants in Korea, with an overall review of energy usage throughout the plants from the fuel, heating, work vehicles, electricity, etc. necessary for process operation. Hwashin will record increasingly sophisticated greenhouse gas inventories with this review as a start and continue to seek means for greenhouse gas reduction.

[Actual Greenhouse Gas Emissions] (Unit: tCO2eq)

Plant	2023		2024	
	Scope 1	Scope 2	Scope 1	Scope 2
Eonhaa Plant	2,463	8,811	2,291	8,401
Bongdong Plant	794	4,459	784	4,364
Yesan Plant	974	2,688	939	2,678
Maheo Plant	-	362	-	359
High-Tech Park Plant	-	55	129	794
Pyeongchon Advanced Research Center	3	8	2	10
Total	4,234	16,383	4,145	16,606

Note 1) The emissions from the Technology Research Center inside Eonhaa Plant are included.
Note 2) Scope 1: LNG gas, LPG gas, CO2 gas, kerosene, diesel, and gasoline
Scope 2: electric power

Greenhouse Gas Emissions Survey for Suppliers

To help its customers achieve their carbon neutrality road map, Hwashin surveyed the greenhouse gas emissions of 17 second-tier suppliers in SQ in 2024, covering the years 2022 and 2023. Thus, Hwashin has expanded the scope of greenhouse gas emissions measurement and management to include Scope 3 and has started monitoring the emissions of its suppliers. Moving forward, Hwashin plans to hold seminars and training sessions for its suppliers on the need to reduce greenhouse gas emissions and manage their electricity use, thereby building consensus on and share the reduction target. If necessary, Hwashin will actively support its suppliers through various programs, including financial and nonfinancial assistance, for the introduction of emissions reducing facilities or process improvements. Through these efforts made, Hwashin aims to help its suppliers set and achieve practical reduction targets and, ultimately, build the foundation for sustainable management together.

Participation in Sub-Supply Chain Carbon Reduction Support Programs

In 2024, Hwashin actively supported its suppliers' greenhouse gas emissions reduction by participating in the customers' "Sub-Supply Chain Carbon Reduction Support Program." This initiative was applied for and participated in with one of its key suppliers, KiseungInd. To precisely analyze the process efficiency and energy usage at the company, Hwashin, along with the customer and a specialized consulting firm, personally visited the facility to conduct a process diagnosis and develop improvement plans. Based on the on-site diagnosis results, the financial support option of linking government support programs and Hyundai-Kia's subsidy program when necessary, was also explored together.

Responding to Climate Change

Energy Usage Reduction

As part of its core strategy for addressing climate change, Hwashin is promoting energy efficiency improvement activities across all its facilities in Korea. To this end, the company is continuously improving high-energy-consuming processes by introducing highly efficient equipment, which is resulting in both greenhouse gas emission reductions and electricity cost savings. In 2024, Hwashin established a dedicated TFT for reducing company-wide carbon emissions. Based on the characteristics of each facility, energy improvement themes were identified and practical reduction strategies developed. Key activities include the proactive replacement of worn-out equipment with highly efficient equipment, process optimization, installation of a Building Energy Management System (BEMS), and replacing remaining outdated lighting fixtures with LED lights in office and plant buildings. Notably, best practices of high savings and investment efficiency are shared across the company to promote horizontal deployment, and future expanded application in other facilities will accelerate systematic energy savings. Through these efforts made, Hwashin is not only reducing its energy consumption, but also building its capacity to respond to climate change.

[Energy Saving Case]

(Unit: KRW million)

Year	Plant	Energy Efficiency Improvement Activity	Saved Amount	Saved Volume	Remarks
2024	Eonhaa Plant	Compressor replacement	11	57,773KW	Replacement of worn-out equipment
	Bongdong Plant	Lighting fixtures replacement	0.5	2,730KW	250W→150W
		Compressor replacement	15	78,750KW	600HP→500HP

Establishment of an Energy Management System

Hwashin has established a BEMS in its Bongdong Plant in 2024 as part of its goal to reduce greenhouse gas emissions through energy consumption reduction. This system monitors energy consumption in real-time and induces efficient operation with features like automatic lighting control, energy usage monitoring and control integration for heating and cooling systems, and power usage visualization (monitoring screen). This helps identify energy waste early on and supports improved operational efficiency. In the future, Hwashin plans to gradually expand the application of this energy management system to other facilities to thereby contribute to company-wide energy efficiency improvements and greenhouse gas emission reductions.

Establishment of an Electric Vehicle and Eco-friendly Forklift Infrastructure

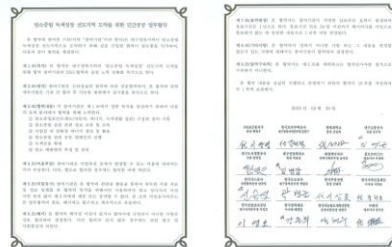

Hwashin is expanding the adoption of electric vehicles and eco-friendly lithium-powered forklifts to reduce carbon emissions in logistics and production sites, while also gradually establishing the necessary charging infrastructure and operating systems to support these initiatives. In the future, Hwashin plans to progressively increase the adoption rate of electric vehicles and eco-friendly forklifts in order to actively respond to climate change and make energy transition efforts.

* As of 2024, among 17 business vehicles excluding trucks and forklifts, 3 are eco-friendly vehicles (17.6%), and there are a total of 7 electric vehicle charging stations.

Responding to Climate Change

Creating a Culture of Energy Saving

Hwashin has signed a "Public-Private Partnership Agreement to Promote Regional ESG Management and Practicing Carbon Neutrality" with the Daegu-Gyeongbuk Regional Headquarters of the Korea Land and Housing Corporation (LH). The purpose of this agreement is to jointly pursue various activities, such as energy savings, green lifestyle practices, and the use of eco-friendly energy, in order to expand carbon neutrality efforts in the region and encourage the voluntary participation of the employees. Through this, Hwashin is fostering a culture wherein the employees can actively participate in energy-saving, green consumption, and other activities in their daily lives.

Regional ESG Collaboration Activities

Hwashin, based on its collaboration with the local community, has participated in the Daegu-Gyeongbuk ESG Promotion Council in 2024 to build its capacity to respond to climate change. Through the Council's meetings, Hwashin exchanged opinions on energy transition and other related matters and created opportunities for collaboration with various stakeholders in the region. In the future as well, the company plans to continuously participate in joint efforts made to respond to climate change.

Participation in Carbon Disclosure Project (CDP)

Since 2023, Hwashin has participated in the CDP Supply Chain program, which is a global environmental information disclosure platform, to transparently disclose carbon emission data across its supply chain and share its responsible approach to responding to climate change with its external stakeholders. In 2024, in addition to participating in the CDP Climate Change, Hwashin also joined CDP Water. Moving forward, Hwashin will continue to actively participate in and support various international environmental initiatives and global campaigns, including CDP.

[CDP Supply Chain Participation Results]

Year	Response	Score	Remarks
2023	Climate change	C	Minimum version
2024	Climate change	C	Full version
	Water	B-	-

Holding Hwashin(HS) ESG Meetings

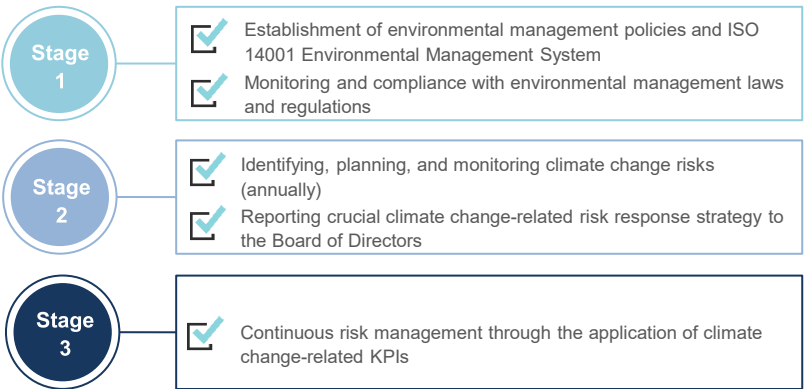

Hwashin annually holds ESG meetings with the relevant departments to discuss greenhouse gas emission reduction strategies for responding to climate change, reducing the emission, and saving energy to achieve its 2030 greenhouse gas reduction target. In early 2025, under the theme "Creating Results through the Establishment of a Global Low-Carbon Management System," Hwashin discussed the company-wide carbon emission reduction goals for 2025 and plans for its reduction activities. Based on the deducted plans, the relevant departments will establish KPIs for management. Moving forward, the company will continuously monitor the progress and achievements made as regards the reduction plans including CDP.

Responding to Climate Change

Climate Change Risk Management System

Hwashin recognizes that climate change can have a significant impact on the sustainability of the company and, to proactively address this, it operates a regular monitoring system for all ESH activities. Through this system, the company identifies and evaluates climate-related physical risks (such as extreme weather and natural disasters) and systemic risks (such as carbon regulations and policy changes). The thus identified risks are reviewed in collaboration with the relevant departments centered around the Safety, Environment, and Health Team, with major risks being reported to the Board of Directors for strategic decision-making. Additionally, key identified risks are managed within an integrated management system linked to the company's business strategies and departmental KPIs, going beyond simple response measures. This approach enhances Hwashin's company-wide execution capacity and ensures alignment between its strategies and risk management.

[Climate Change Risk Management System]

※ Current level: Stage 3

Climate Change Risk Management Process

Hwashin has established and operates a four-stage climate change risk management process to proactively identify and effectively respond to the impacts of climate change. This process is carried out systematically through collaboration among the Safety, Environment, and Health Team and ESG-related departments.

[Climate Change Risk Management Process]

Responding to Climate Change

Major Environmental Risk and Opportunity Factors

Hwashin recognizes that the changes in the Korean and international climate policies and environmental issues to achieve the 2030 greenhouse gas reduction targets are key business risks. At the same time, the company is developing strategies to turn these risks into new business opportunities. The risks are categorized into transition risks and physical risks with a focus on climate change and carbon emission reduction as the major environmental factors, while natural capital-related risk factors are also assessed. Every risk and opportunity factor is identified from short-term, mid-term, and long-term perspectives, with appropriate response strategies and potential financial impacts being identified for each item.

Risk		Timeline	Risk/Opportunity Factor	Potential Financial Impact	Hwashin's Response Strategy
Transition Risks	Regulation	Long-term	Strengthening greenhouse gas emission regulations and climate change policies	Increase in operating costs to achieve the greenhouse gas emission reduction targets (transition to renewable energy)	Establishing and implementing greenhouse gas emission reduction strategies
	Market	Mid-term	Changes and increase in customer demands related to climate change	Bidding penalties due to failure to meet the corporate client ESG evaluation standard ratings	Securing the capacity to respond to customer demands Establishing an in-house LCA system
	Technical	Long-term	Switch to low-carbon products	Increasing costs for carbon emission computation and investment to reduce the emission	Investment and R&D for low-carbon product technologies
	Reputation	Mid-term	Climate risk assessment and ESG evaluation disclosure requirements	Decrease in sales because of deterioration in reputation and the unavailability of ESG-related low-interest products	Capacity building for ESG evaluation response and disclosure of climate risk-related information (CDP)
Physical Risks	Natural Disaster	Long-term	Occurrence of natural disasters such as earthquakes, typhoons, wildfires	Material and human damages, loss costs due to plant shutdowns	Establishing emergency response procedures, carrying out simulation drills, and purchasing disaster insurance
	Rising Temperatures	Long-term	Water shortage because of rising annual mean temperatures and precipitation patterns	Decline in the operation rate and sales because of unavailability of water for industrial use	Preparing plans for water reuse in processes and implementing activities to reduce residential water use
Other Risks	Natural Capital	Long-term	Ecological destruction from plant pollutants	Decline in corporate image and sales from complaints	Voluntary/periodic river pollution monitoring
Opportunity Factors	Reputation	Mid-term	Climate risk assessment and ESG evaluation disclosure requirements	Enhanced credibility and corporate value with corporate clients leading to access to low-interest financial products	Capacity building for responding to ESG evaluations Disclosure of climate risk-related information (CDP)
	Market	Mid-term	Increased expectations from corporate clients from fulfilling their demands Increased trust from clients	Increased trust from clients due to the rise in corporate value	Establishing carbon emission reduction targets and carrying out activities
	Resource Efficiency	Short-term	Enhanced workplace energy efficiency	Cost reduction through operational cost, raw materials, and waste reductions	Review of low-carbon energy sources and highly efficient resource usage
	Natural Capital	Long-term	Reduced complaints by minimizing impacts on the surrounding environment, etc.	Enhanced corporate credibility through ecosystem cleanup activities	Carrying out company building outskirts and river cleanup activities

Establishment of Eco-Friendly Workplaces

Air Pollutant Emission Management

Hwashin has established internal management standards and goals that are 30% more stringent than the legal emission requirements in order to reduce air pollutants generated at its facilities, thereby creating a strengthened environmental management system that it strives to continuously adhere to. Additionally, air pollution control facilities have been installed and are operated at key processes, with regular inspections and preventive maintenance being conducted to ensure optimal performance. Specifically, abnormal pollutant leakage, such as from filter damage, is proactively prevented and managed, ensuring that all air pollutant emissions remain below the legal and internal target limits. Moving forward, Hwashin will continue its efforts to minimize its environmental impacts.

[Air Pollutant Emission Management Targets]

Type	Legal Standard	2024 Target (Internal Management Standard)
Dust (PM)	Up to 30 mg/m ³	Up to 21 mg/m ³
Sulfur Oxides (SOx)	Up to 200 ppm	Up to 140 ppm
Carbon Monoxide (CO)	-	-
Nitrogen Oxides (NOx)	Up to 150 ppm	Up to 105 ppm
Hydrochloric Acid (HCl)	Up to 3 ppm	Up to 0.4 ppm
Formaldehyde (CH ₂ O)	Up to 8 ppm	Up to 5.6 ppm
Copper (Cu)	Up to 4 mg/m ³	Up to 2.8 mg/m ³
Total Hydrocarbons (THC)	Up to 200ppm	Up to 140ppm

Self-Measurement of Air Pollutants and Emission State

Hwashin systematically and thoroughly manages air pollutants generated at its facilities in accordance with relevant laws, including the “Clean Air Conservation Act” of Korea. For major pollutants such as dust (PM), sulfur oxides (SOx), and nitrogen oxides (NOx), Hwashin regularly commissions institutions specializing in the environment for their measurements. General air pollutants are measured twice a year, while specific hazardous air pollutants are measured at least twice a month. The measurement results are reported to the internal management system and the government's environmental information management system, with continuous monitoring of compliance with emission standards. Hwashin will thus continue to practice responsible eco-friendly management by transparently disclosing annual emission data in the future as well to minimize its impact, including CDP.

[Major Air Pollutant Emissions]

Type	Eonha Plant Emissions		
	2022	2023	2024
Dust (PM)	0.13	0.12	0.12
Sulfur Oxides (SOx)	-	0.24	0.06
Nitrogen Oxides (NOx)	0.52	0.60	0.24

(Unit: ton)

Note 1) Emission data for the Technology Research Center, Bongdong Plant, and Yesan Plant, excluding the Eonha Plant, are provided in the APPENDIX.

Note 2) The emission data are the average values of the first and second halves of the year.

Establishment of Eco-Friendly Workplaces

Operation of Air Pollution Prevention Facilities

Hwashin has installed and operates various air pollution prevention facilities to reduce air pollutants (including odor components) generated during the operation of its facilities. Specifically, in one of the main processes, the painting process, Hwashin has implemented a Regenerative Thermal Oxidizer (RTO) to oxidize volatile organic compounds (VOCs) and odor-causing substances at high temperatures, thereby converting them into harmless materials while also considering energy efficiency and odor complaints from the local community. Additionally, the company operates a combination of other pollution control equipment, such as dust scrubbers, adsorption towers, and air filters. Each facility is regularly inspected, and when they become worn out or their functions decline, they are replaced or repaired to maintain optimal performance.

[Status of Air Pollution Preventing Facilities Operation]

Place of Business	Air Filtration Facility	Absorption Facility (Wash Tower)	Absorption Facility	Combustion Facility (R.T.O)
Eonhaa Plant	2	2	1	1
Technology Research Center	6	-	-	-
Bongdong Plant	8	-	-	-
Yesan Plant	1	1	2	1
High-Tech Park Plant	-	-	-	-

[Air filtering facility]

[Absorption facility - wash tower]

[Combustion facility - RTO]

Installation of IoT in Air Pollution Prevention Facilities

Hwashin has completed the installation of Internet of Things (IoT)-based air pollutant measuring devices at relevant facilities in the Bongdong Plant in 2024, in compliance with Paragraph 1, Article 17 of the “Enforcement Decree of the Clean Air Conservation Act,” which mandates the installation of IoT monitoring devices for small-scale air emitting facilities (types 4 and 5). Through this IoT-based management system, Hwashin is able to not only comply with laws and regulations, but also monitor air pollutants in real time, thereby proactively managing abnormal operations and preventing the excess emission of pollutants. Moving forward, Hwashin will continue to expand its IoT-based monitoring systems across its facilities to contribute to sustainable facility operation and build trust with the local community.

[Bongdong Plant's IoT Installation Target]

Equipment Name	Facility Name	Measuring Instruments

Establishment of Eco-Friendly Workplaces

Water Pollutant Output Management

Hwashin has established and operates separate water quality management regulations to minimize the output of water pollutants generated at its facilities. In accordance with relevant regulations, logs of wastewater discharge facilities and water pollution preventing facilities are prepared on a daily basis, thereby ensuring systematic water quality management. Additionally, as with air pollutant management, Hwashin has established internal management standards that are 30% more stringent than legal discharge thresholds, and these have been set as the annual water quality management goals. Through such water pollutant control, Hwashin strives to prevent pollutant inflow into water systems and contribute to the preservation of local water quality environments. Moving forward, Hwashin will continue to build its management capacity and persist in efforts to reduce water pollution.

[Water Pollutant Discharge Management Targets]

Measured Substance	Legal Standard	2024 Target (Internal Management Standard)
pH (Hydrogen Ion Concentration Index)	5.8-8.6	-
Biochemical Oxygen Demand (BOD)	Up to 80 mg/L	Up to 56 mg/L
Suspended Solids (SS)	Up to 80mg/L	Up to 56 mg/L
Normal Hexane Extracted Substances (n-H)	Up to 5 mg/L	Up to 3.5 mg/L
Zinc (Zn)	Up to 5 mg/L	Up to 3.5 mg/L
Copper (Cu)	Up to 3 mg/L	Up to 2.1 mg/L
Total Nitrogen (T-N)	Up to 60 mg/L	Up to 42 mg/L
Total Phosphorus (T-P)	Up to 8 mg/L	Up to 5.6 mg/L
Alkyl Benzene Sulfonate (ABS)	Up to 5 mg/L	Up to 3.5 mg/L
Total Organic Carbon (TOC)	Up to 50 mg/L	Up to 35 mg/L

Self-monitoring of water pollutant levels and discharge status

To strictly comply with the wastewater discharge standards under the “Water Environment Conservation Act” of Korea, Hwashin requests an environmental expert agency to periodically measure the concentration of major water pollutants discharged from wastewater discharging facilities twice a year. The measured pollutants include Total Organic Carbon (TOC), Biochemical Oxygen Demand (BOD), Suspended Solids (SS), Total Nitrogen (T-N), and Total Phosphorus (T-P). The measurement results are then compared and analyzed against both legal and internal standards to verify at all times whether the discharge limits have been exceeded. Through these regular self-measurements and a rigorous management system, Hwashin minimizes its impact on the water quality environment and is committed to realizing sustainable environmental management.

[Major Water Pollutant Discharge Volume]

(Unit: mg/L)

Water Pollutant	Eonha Plant Discharge		
	2022	2023	2024
Total Organic Carbon (TOC)	45.9	14.8	24.5
Biochemical Oxygen Demand (BOD)	4.3	3.0	2.5
Suspended Solids (SS)	13.7	5.1	1.8
Total Nitrogen (T-N)	3.89	27.1	7.6
Total Phosphorus (T-P)	1.24	2.4	0.108

Note 1) Discharge volumes of the Eonha Plant and Yesan Plant are listed in the APPENDIX.
Note 2) Discharge volumes are the average values measured for the first and second halves of the year.

Establishment of Eco-Friendly Workplaces

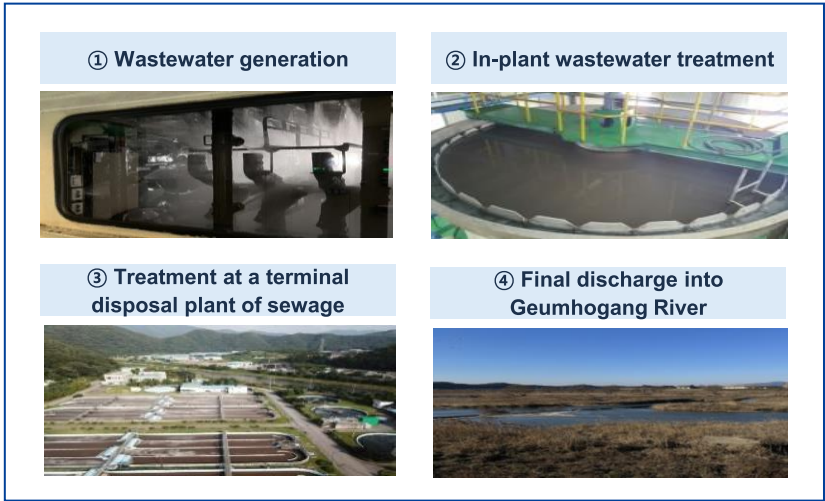

Operation of Water Pollution Preventing Facilities

Hwashin recognizes that preventing water pollution, which may occur during the production process, is a key environmental management task and has established and operates systematic water pollution preventing facilities to contribute to the protection of regional water resources. Specifically, both the Eonha Plant and Yesan Plant have their own wastewater treatment plants, where wastewater generated from the production process is treated directly on-site and then discharged according to appropriate standards. These wastewater treatment facilities consist of a system that has applied a combination of physical, chemical, and biological treatment processes. Through activated carbon filters, fine pollutants and residual organic matter are effectively removed to significantly reduce the pollution load of wastewater. Additionally, Hwashin conducts regular inspections to ensure the stable operation of water pollution preventing facilities and manages the entire process from wastewater generation to treatment and the final discharge according to standardized procedures. Meanwhile, at other facilities excluding the Eonha and Yesan Plants, wastewater is processed through specialized external outsourced agencies, and continuous efforts are made to reduce waste.

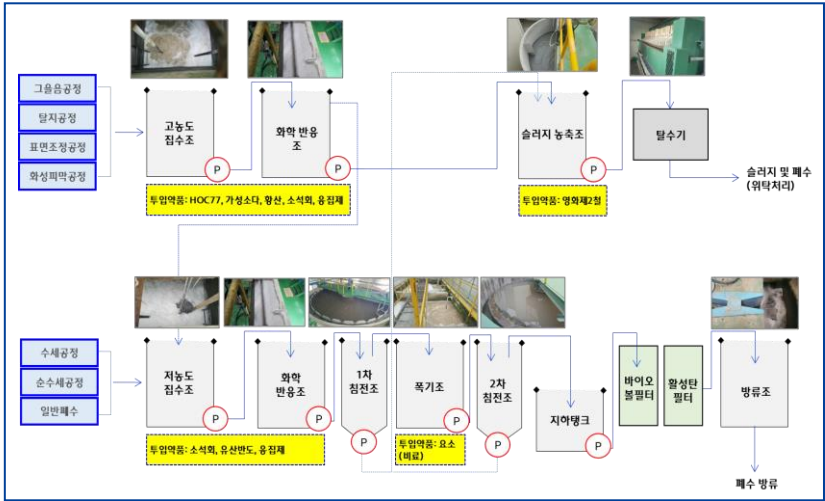

[Operation State of Water Pollution Preventing Facilities]

Plant	Wastewater Treatment Plant	Remarks
Eonha Plant	1	
Technology Research Center	-	External outsourcing in progress
Bongdong Plant	-	External outsourcing in progress
Yesan Plant	1	
High-Tech Park Plant	-	No environmental equipment

[Wastewater Treatment Process]

[Wastewater Treatment Process inside a Facility]

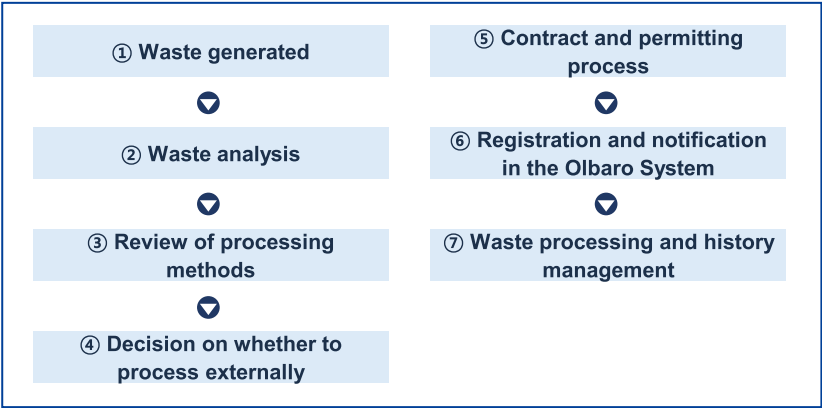

Establishment of Eco-Friendly Workplaces

Waste Management

Hwashin aims to establish eco-friendly workplaces through waste reduction and resource circulation enhancement. To achieve this, the company has established waste management regulations and requires their strict adherence across all its facilities. Waste generated at each facility is collected, transported, stored, and processed according to these regulations. The amount of waste generated and the recycling state are periodically compiled and reviewed. While the volume of waste is expected to increase in line with the rise in production output, Hwashin plans to minimize waste generation and progressively improve the recycling rate by managing waste per unit of production, as well as planning and implementing various resource circulation campaigns. In addition, designated waste is legally processed through authorized professional companies in accordance with the “Wastes Control Act” of Korea. When outsourcing for treatment, the waste is weighed, and the information is recorded in the computerized system for waste processing, that is, “Olbaro System,” and transparently disclosed.

[Waste Management Process]

Setting Waste Reduction Targets

Hwashin has set its own waste reduction targets since 2019 and measures the waste output on a monthly, company-wide basis for management. If there is a sharp increase in emissions, the fundamental causes are identified, reviewed, and analyzed to carry out improvement activities for waste output reduction at each facility. Hwashin set the goal of reducing the waste emissions by more than 5% in 2024 compared to 2023. However, the actual result was a reduction from 981 tons to 939 tons, achieving only approximately a 4.3% decrease. As such, Hwashin plans to implement various practical initiatives in 2025, such as enhancing waste sorting and building a waste resource circulation system, to achieve this goal. Moving forward, Hwashin will continue its efforts to minimize waste generation and improve its recycling rate to thereby contribute to the realization of eco-friendly workplaces, including CDP.

[Waste Processing Performance]

(Unit: ton)			
Type	2022	2023	2024
Total waste (A)	868	981	939
Amount Recycled (B)	543	699	762
Recycling Rate (C)	63%	71%	81%
Sales (D)	KRW 946.9 billion	KRW 957.1 billion	KRW 940.6 billion
Waste per KRW (A/D)	0.09 tons/KRW 100 million	0.10 tons/KRW 100 million	0.10 tons/KRW 100 million

Establishment of Eco-Friendly Workplaces

Waste Resource Circulation (slag)

Hwashin continues to promote pollutant reduction activities through the recycling, reuse, and waste reduction based on its ESH management policies. Specifically, the company has shifted the processing of slag waste, a type of general waste generated in all its facilities in Korea, from landfill dumping to recycling. Slag is a byproduct generated during metal processing or heat treatment in the production process. Hwashin removes foreign matter from slag as the first step in the process within the company. Afterward, through component analysis and particle size

screening, approximately 60% of the total waste is processed into iron oxide and recycled. Moving forward, Hwashin will build a waste resource circulation system that gradually expands the circular usage rate of resources and do its utmost to contribute to a sustainable future.

[State of Slag Recycling in 2024]

(Unit: kg)

Site	Total Amount of Slag Output	Amount of Recycled Slag	Actual Amount Recycled
Eonha Plant	26,890	26,890	16,134
Bongdong Plant	50,040	50,040	30,024
Technology Research Center	39,830	39,830	23,898
Total	116,760	116,760	70,056

Note 1: Actual amount recycled: total amount of slag output (recycling disposal method) × 0.6 (waste processing rate)

Reuse of Hydraulic Fluids

By reusing waste hydraulic fluids, Hwashin has established a resource-circulating production system, achieving both environmental and economic benefits through waste reduction and cost savings. It has established and is operating a system of refining the mixture of used hydraulic fluids and underground water generated during the production process to recover and reuse the fluids. With this system of reusing the fluids, Hwashin strives to minimize resource waste and reduce environmental in the workplace.

[State of Hydraulic Fluids Reuse]

Year	Reused Amount	Cost Savings
2022	5,000L	KRW 12.196 million
2023	2,600L	KRW 6.341 million
2024	8,650L	KRW 21.098 million

Conversion of Wastewater Sludge for Recycling

Since 2023, Hwashin has shifted the treatment method for wastewater sludge generated during production from landfill dumping to recycling and has completed the necessary regulatory approval updates accordingly. This measure goes beyond a simple change in disposal method and represents a proactive effort to enhance the added value of waste and reduce the environmental burden caused by landfill use. In the future as well, Hwashin will continue to seek ways to expand the reuse and recycling of waste to thus minimize its environmental impact, and strengthen its foundation for sustainable production.

Establishment of Eco-Friendly Workplaces

Employee Participation (Waste Sorting Activities)

To establish eco-friendly workplaces, Hwashin promotes not only company-wide environmental management, but also the voluntary participation of its employees in environmental initiatives. As part of these efforts made, the company has strengthened its waste sorting system for domestic waste generated within its facilities among general waste to boost the recycling rates through active employee engagement. Dedicated separation bins have been installed at all sites to collect items by category—paper, cans, glass bottles, vinyl, colored plastic, colorless plastic, and general waste. Since 2021, Hwashin has also run an internal campaign called the “Movement to Keep Earth Beautiful,” through which it monitors participation in waste sorting weekly. This campaign aims to raise awareness and encourage employee engagement in waste sorting. Moving forward, Hwashin will continue to expand a culture of practicing ESG management in daily life so that the voluntary employee engagement in the management becomes the foundation of the company’s eco-friendly management.

Reducing Disposable Product Usage

As part of its everyday practices to conserve resources and reduce waste, Hwashin actively promotes initiatives to reduce the use of disposable products within its workplaces. In particular, to minimize the use of paper cups in offices and shared spaces, Hwashin encourages all its employees to use personal cups. The General Affairs Team centrally purchases and distributes paper cups, allowing the company to regularly monitor their usage volume. Additionally, hand dryers have been installed in restrooms and wash areas to reduce the consumption of paper towels. These efforts contribute not only to reducing the use of disposable products, but also to decreasing overall waste generation. Moving forward, Hwashin will continue to expand initiatives aimed at minimizing the use of disposable products and raising employee awareness in order to establish a culture of eco-friendly practices in daily life and build a sustainable workplace environment.

Use of Eco-Certified Products

Hwashin purchases eco-certified paper cups for use in offices and meeting rooms, and also provides eco-certified products to the employees on special occasions such as celebrations and condolences, thereby minimizing environmental impact and contributing to the realization of ESG values. Moving forward, Hwashin will continue to expand the application of the “green procurement” principle that considers the environmental impact from the selection stage for all products used within its workplaces.

Establishment of Eco-Friendly Workplaces

Development of Low-Carbon, Highly Efficient Workplaces

To build a sustainable manufacturing environment, Hwashin is advancing the design and operational system in its facilities toward an eco-friendly infrastructure and highly efficient equipment. As part of this initiative, the company completed the construction of its new High-Tech Park Plant in 2024, building it from the initial design phase as a smart factory model that prioritizes low-carbon emissions, resource efficiency, and energy optimization. In particular, the High-Tech Park Plant was structurally optimized for the future installation of solar power systems in mind. Once these systems are in place, a significant reduction in Scope 2 emissions is anticipated. In this respect, the High-Tech Park Plant is settling as a flagship eco-friendly workplace that embodies Hwashin's commitment to ESG management and will serve as a guideline for future facility establishment.

Establishment of Eco-Friendly Workplaces

Biodiversity Policy

Hwashin recognizes in advance the risks of ecosystem degradation and biodiversity loss that may arise across its business operations, and has established a “Biodiversity Policy” to prevent and minimize such risks. As part of Hwashin’s sustainable management strategy, this policy outlines the principles and implementation direction for responsible management that takes into account harmony with natural ecosystems throughout all its business activities. Hwashin regards biodiversity conservation as a critical environmental issue closely linked to climate change. To enhance the effectiveness of this policy, the company plans to carry out regular biodiversity preservation activities and monitoring, as well as review and improve related policies on an ongoing basis.

Water Quality Monitoring of the Geumhogang River Basin

As part of its efforts to protect the local aquatic ecosystem, Hwashin voluntarily carries out water sampling and observation activities in the Geumhogang River basin once a year. The results of the water sampling are reported through the company’s internal environmental management system and are reflected in future improvement plans aimed at reducing pollution and minimizing environmental impact. Hwashin will continue engaging in these voluntary water system monitoring activities to contribute to the protection of riverine life habitats in the local community.

[2024 Geumhogang River Effluent Pollution Levels]
(Unit: ppm)

Substance	Raw Wastewater	Wastewater Treated On site	Wastewater Released to Geumhogang River
BOD	738	3	0.9
SS	234	5.1	2.2
TOC	349	14.8	14.4
Zn	7.946	2.1	0.003
Cu	0.067	-	Not detected
ABS	12.486	0.03	Not detected

Carrying out Environmental Cleanup Activities

Hwashin recognizes the importance of biodiversity conservation and is engaged in regular environmental cleanup activities around its business sites to protect and maintain the local biodiversity. The company regularly carries out nature cleanup activities on the outskirts of the company grounds and nearby streams. These initiatives are carried out not only by the employees but also in collaboration with local governments and communities, thereby creating opportunities to expand the scope of regional ecosystem preservation. Moving forward, Hwashin will work to establish more concrete and effective strategies —such as preventing damages to terrestrial and aquatic ecosystem conservation areas, and monitoring and protecting endangered species— in order to contribute to the preservation and enhancement of the local biodiversity.

Identifying Endangered Species

Hwashin refers to the “Statistical Data Book of Endangered Wildlife Species” published by the Korean Ministry of Environment and the National Institute of Ecology to identify endangered species inhabiting areas near its business sites in Korea. Based on the information, the company seeks to proactively recognize the potential impacts of its business activities on the local ecosystems and draw up strategies aimed at minimizing biodiversity loss as a company that works in harmony with the local ecosystems.

[List of Endangered Species]

Regions Nearby the Worksites	Class I Endangered Species	Class II Endangered Species
Yeongcheon	Otter and Korean Stumpy Bullhead, etc.	Marten, hawk, and diving beetle, etc.
Yesan	Stork and Suweon Tree Frog, etc.	Leopard cat and Saunders' gull, etc.

Establishment of Eco-Friendly Workplaces

Hazardous Chemicals Management

Hwashin places high importance on the impact of hazardous chemicals on its workers' health and the local environment and operates a systematic management system to ensure their safe handling and control. All hazardous chemicals are managed in compliance with relevant laws and regulations, with only authorized quantities handled through the appropriate licensing procedures. Strict standards are applied throughout the entire process—from storage and use to disposal. At sites where hazardous chemicals are handled, the company complies with all legal requirements in purchasing and using the chemicals, including the installation inspection of the handling facilities, business license registrations, off-site impact assessments, and the establishment of chemical accident prevention and management plans. In addition, Hwashin has established and operates internal hazardous chemicals management guidelines. These guidelines not only ensure compliance with external regulatory standards, but also a double layer of safety through in-house and external verification. Hwashin will continue strengthening its management system to minimize risks associated with hazardous chemicals and realize a safe working environment and sustainable production operations.

[2024 Regular Inspection Results of Hazardous Chemicals Handling Facilities]

Type	No	Inspected Item	Whether Appropriate
Document review	1	Inspection log of hazardous chemicals handling facilities	Appropriate
	2	Hazardous chemicals inbound/outbound log	Appropriate
	3	Hazardous chemicals business license	Appropriate
	4	Inventory check of hazardous chemicals storing facilities	Appropriate
On-site inspection	1	Entering and exiting personnel control list for hazardous chemicals storing areas	Appropriate
	2	Verification of sign posting indicating hazardous chemicals handling sites	Appropriate
	3	Verification of availability of safety protective gear	Appropriate

Prevention of Chemical Accidents and Enhancement of Safety Capabilities

Hwashin undertakes multilateral preventive measures to proactively prevent accidents involving hazardous chemicals and ensure worker safety. As part of these efforts made, Material Safety Data Sheets (MSDS) are made available at all business sites. All MSDS are obtained and updated annually through the respective manufacturers. Additionally, warning signs are posted in areas where hazardous chemicals are used, helping workers to clearly recognize the potential risks associated with each substance. These measures enable workers to

respond quickly and appropriately in case of an emergency. In addition, Hwashin provides regular, legally mandated training for managers, handlers, and workers involved in the use of hazardous chemicals. The trainings cover essential safety guidelines, emergency response procedures, and the proper use of personal protective gear, thereby enhancing their ability to practically respond to emergencies. Moving forward, Hwashin will continue to promote a company-wide, prevention-focused safety culture and implement safety management practices with the goal of achieving “zero” chemical accidents.

Participation in the Chemical Safety Community Activities

To ensure a systematic response to emergencies such as chemical accidents, Hwashin has established a Chemicals Safety Network in collaboration with the Daegu Regional Environmental Office and 12 other companies in the Yeongcheon area. The company is building its emergency response capacity by supporting disaster response equipment, joint drills, and the maintenance of an emergency contact network. Hwashin also participates in regular video conferences and discussion sessions organized by the Environmental Office to continuously share the on-site opinions.

Talent Management

Fair Recruitment and Diversity Assurance

Hwashin regards talent as a key driver of corporate competitiveness and fosters an organizational culture that respects diversity and inclusion through fair and nondiscriminatory hiring practices. During the recruitment process, candidates are evaluated based on their competencies and job suitability regardless of sex, region, educational background, nationality, religion, disability, age, social status, or political views. The company also continues to expand employment opportunities for persons with disabilities and eligible veterans. Hwashin defines its ideal talent with the core values of “principled thinking, innovative, customer focused, good communication skills, and a challenge taking spirit.” It equally places emphasis on selecting and developing the capabilities of individuals who embody these qualities. To further enhance the fairness and credibility of the recruitment process, the company has upgraded its recruitment system to ensure transparency throughout—from job postings and screening procedures to result notifications. This approach enables applicants to clearly understand and trust the recruitment process and Hwashin to realize its commitment to responsible hiring practices. Going forward, Hwashin will continue to promote a fair hiring culture and expand growth opportunities for diverse talents, thereby ensuring that the potential of each individual contributes to the company’s sustainable growth.

[Recruitment Process Stages]

Recruiting Global Talents

To strengthen its global competitiveness, Hwashin is also advancing strategies to identify and foster outstanding global talents while respecting diversity in nationality and culture. As part of this initiative, Hwashin has conducted on-campus recruitment at major universities in Vietnam since 2023. The selected excellent candidates were offered opportunities to participate in on-site practical training and job shadowing at Hwashin’s local subsidiary, Thanh Cong Hwashin. This program allowed the participants to experience the company’s culture and working environment in advance. To support language adaptation, a Korean language learning program was concurrently provided. Those who successfully completed the on-site training and passed the Korean Language Proficiency Test were ultimately given the opportunity to join Hwashin’s headquarters in Korea as full-time employees. Through this approach, Hwashin identifies the potential of global talents early on and helps them grow into key personnel equipped with both practical skills and adaptability to the organization. Hwashin will continue to enhance diversity and inclusion within the company by attracting and nurturing global talents, thereby securing sustainable competitiveness in the global market.

[Vietnam on-campus recruitment]

Talent Management

Talent Retention Initiatives

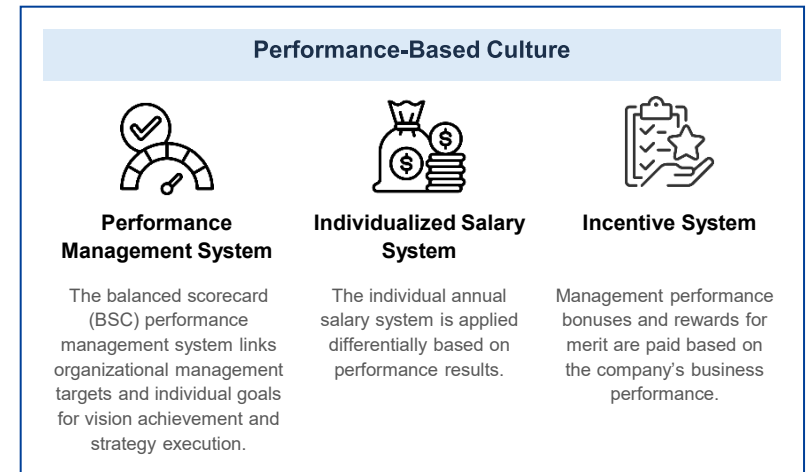

Hwashin implements a variety of talent retention initiatives to help employees quickly adapt to the organization, develop a strong sense of ownership and satisfaction, and grow over the long term. Recognizing that a strong onboarding experience is critical for future retention and engagement, the company offers a welcome program specifically for new hires. As part of this initiative, Hwashin provides a “Welcome Kit” to all new employees upon joining. The kit includes essential work supporting materials such as a work manual and job-related books, which are carefully selected, purchased, and provided to support them in performing initial tasks. It also features eco-friendly items like solid toothpaste and bamboo toothbrushes, helping new employees feel connected to the organization while sharing Hwashin’s environmentally conscious values. In addition to the Welcome Kit, Hwashin supports newcomers through orientation sessions and department-specific onboarding programs to ensure their smooth adaptation in the company. Moving forward, Hwashin will continue to value the initial employee experiences and expand its retention programs to foster a workplace culture where people want to grow and thrive together.

[Eco-friendly welcome kit]

Performance-Based Fair Compensation System

Hwashin has established a performance-based compensation system to fairly evaluate and reward the achievements and contributions made by its employees. By linking individual and organizational performance, the company fosters a fair and transparent compensation culture. Performance evaluations are conducted using a multi-dimensional assessment method that incorporates both quantitative and qualitative performance indicators to ensure objectivity. Regular feedback and goal-setting meetings between evaluators and those being evaluated enhance the acceptance of the evaluation results and support the growth of each employee. Compensation is differentiated based on performance ratings, with adjustments to annual salaries and performance bonuses. High performers are further motivated through various incentives, including performance bonuses and promotion opportunities. Going forward, Hwashin will continue to reinforce its performance-oriented organizational culture and enhance its transparent and trustworthy compensation system to ensure that its employees are fairly recognized for their efforts made.

Talent Management

Employee Development System

Hwashin firmly believes that the expertise and capabilities of its employees are key drivers of corporate competitiveness. With this understanding, the company has established and continuously implements a structured talent development strategy to ensure that every member may grow alongside the organization. Hwashin systematically analyzes the competencies required for each role—based on position, job function, and responsibilities—and operates tailored training programs that align with these needs. These programs are provided equitably to all the employees, including non-regular staff, and are designed to provide equal and fair access to learning opportunities to all employees. Furthermore, the company has developed a company-wide training system diagram based on its talent development strategy and provides detailed participation guides to encourage voluntary and autonomous learning among the employees. This approach contributes to fostering a culture of employee-led learning. Each year, Hwashin develops an annual training plan and continuously supplements and expands practical and effective training contents linked to on-the-job performance. Moving forward, the company will continue to foster future-oriented talents for the joint growth of both the individual employees and the organization.

[Employee Development Strategy]

[Company-Wide Training System Diagram]

Talent Management

Employee Competence Development Programs

Hwashin operates multi-layered and systemic competency development programs to enhance employees' job expertise and potential for growth within the organization. From the early stages of employment to practical skill adaptation, job expertise development, and leadership advancement, the company is establishing a full life-cycle learning system for all employees. In addition, Hwashin supports employees in easily identifying learning opportunities and participating voluntarily. After each program, satisfaction and effectiveness evaluations are conducted with participants, and the results are reflected in the improvement of future courses and the selection of instructors to continuously enhance the quality of training programs.

Human Rights Management

Human Rights Policy

Hwashin recognizes the protection of and respect for human rights for all internal and external stakeholders involved in its business activities—including its employees, suppliers, and customers—as a fundamental responsibility. Based on international human rights and labor standards, such as the Universal Declaration of Human Rights and the United Nations Guiding Principles on Business and Human Rights, Hwashin practices human rights management with respect for human dignity as a core value. To this end, the company has established a human rights policy outlining its commitments and detailed principles regarding key human rights issues, including the prohibition of discrimination and harassment, compliance with and improvement of working hours, elimination of forced and child labor, freedom of association and collective bargaining, assurance of occupational safety, and protection of the human rights of local communities and customers. This policy applies to all its Korean and international worksites. Hwashin will continue to strengthen its implementation efforts to ensure genuine protection of human rights, grounded in a corporate culture that upholds human dignity.

Prohibition of Discrimination and Respect for Diversity

Hwashin prohibits any form of unjust discrimination against its employees and strives to be an inclusive company that respects employee diversity. In the recruitment process, no discrimination is made based on sex, race, ethnicity, nationality, religion, age, family status, pregnancy and childbirth, social status, or political beliefs. After hiring, fair and equal opportunities are ensured across all aspects of HR management—including promotions, compensation, training, wages, and welfare benefits. Hwashin will continue to strengthen its HR policies and institutional foundations to respect diversity and inclusiveness.

Participation in and Support for the United Nations Global Compact (UNGC)

Since April 2025, Hwashin has participated in UNGC, working to incorporate the Ten Principles spanning the four key areas of human rights, labor, environment, and anti-corruption, into its corporate strategies and operations. Accordingly, the company plans to align its internal human rights management systems and policies based on the principles of UNGC. Moving forward, Hwashin will continue to uphold the UNGC principles and faithfully fulfill its role in promoting sustainable development as a responsible member of the global civil community.

[UNGC Ten Principles]

Type	Ten Principles	
Human rights	Principle 1	Businesses should support and respect the protection of internationally proclaimed human rights;
	Principle 2	Make sure that they are not complicit in human rights abuses
Labor	Principle 3	Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining;
	Principle 4	The elimination of all forms of forced and compulsory labor;
	Principle 5	The effective abolition of child labor;
	Principle 6	The elimination of discrimination in respect of employment and occupation
Environment	Principle 7	Businesses should support a precautionary approach to environmental challenges;
	Principle 8	Undertake initiatives to promote greater environmental responsibility;
	Principle 9	Encourage the development and diffusion of environmentally friendly technologies
Anti-corruption	Principle 10	Businesses should work against corruption in all its forms, including extortion and bribery.

Human Rights Management

UN Sustainable Development Goals (SDGs)

Hwashin has established its ESG management strategies aligned with the United Nations Sustainable Development Goals (SDGs) to promote a sustainable future. Its key initiatives are linked to specific SDGs, as outlined below. As a responsible global company, Hwashin will continue to implement the UN SDGs and pursue sustainable management across all areas—environmental, social, and governance.

[UN SDG Implementation Status]

Human Rights Management

Operation of a Human Rights Grievance Counseling and Reporting System

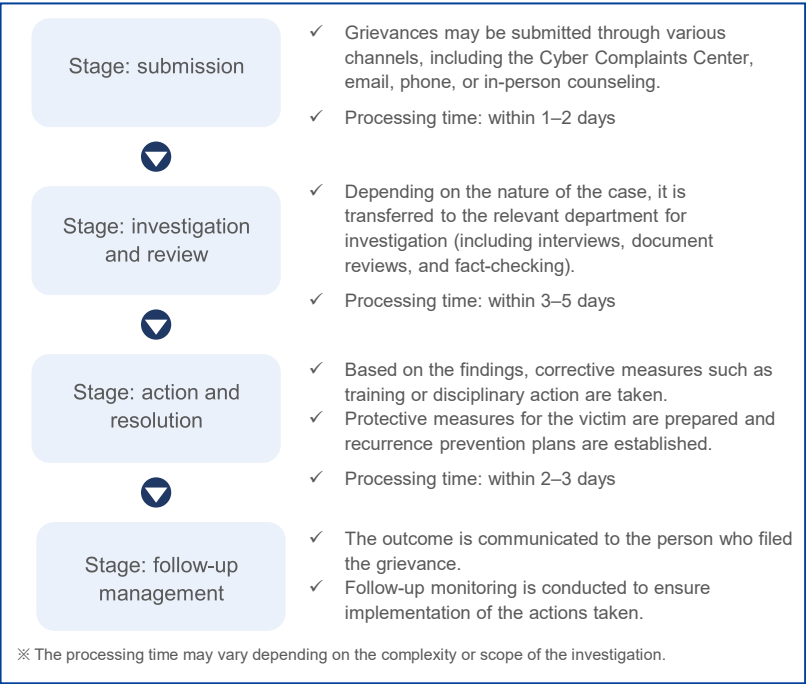

Hwashin operates a grievance resolution system to ensure that any human rights violations—such as workplace bullying, sexual harassment, or unfair treatment—that employees may encounter during their work are addressed promptly and fairly. To this end, Hwashin has established an internal grievance center along with an integrated reporting channel called the “Cyber Complaints Center” to receive reports related to human rights and ethics. The system allows for both anonymous and real-name reports and counseling through various channels, including email and phone. The content of the filed reports and the personal details of the informants are kept strictly confidential. Protective measures are also in place to ensure that no disadvantage or retaliation occurs as a result of the report. Upon receipt, reports are classified by the system or responsible personnel according to the nature of the case and then forwarded to the relevant department. A dedicated team then conducts the necessary investigations and takes appropriate action. Hwashin goes beyond simply resolving individual issues by actively protecting victims’ rights through a comprehensive response system that includes post-report support and measures to prevent the recurrence of the abuse in the workplace.

※ No reports of human rights violations were received in 2024

Employee Human Rights Training

Hwashin conducts human rights training sessions for all employees, including the legally mandated training, to promote a culture of respect for human rights and the advance prevention of human rights risks. Educational materials and manuals are shared via the company’s internal bulletin board to support voluntary learning and raise awareness. Hwashin will continue to strengthen its human rights training system to foster a healthy and safe organizational culture.

[Grievance Handling Process]

[Mandatory Training Completion Rate in 2024]

NO.	Training Program	Completion Rate
1	Workplace Sexual Harassment Prevention Training	99.1%
2	Workplace Bullying Prevention Training	99.1%
3	Disability Awareness Training	99.0%
4	Personal Information Protection Training	98.8%
5	Human Rights Protection Training	98.7%

Note 1) Employees who did not complete the training were on leave or overseas business trips.

Human Rights Management

Human Rights Impact Assessment

Hwashin conducts human rights impact assessments to systematically identify, prevent, and manage direct and indirect human rights risks that may arise during corporate management activities. These assessments serve as a core mechanism for identifying potential violations and fostering a human rights–friendly corporate culture. Based on the “Guidelines for Human Rights Management, and Check List” provided by the National Human Rights Commission of Korea, Hwashin developed its own self-assessment questionnaire. The assessment covers ten key human rights areas, including prohibition of discrimination, prevention of bullying, prohibition of forced labor, and assurance of occupational safety. Employee responses to each item are collected and analyzed to identify potential human rights risks within the organization. Areas needing improvement are addressed by having the relevant departments deduct follow-up tasks and plan improvement measures. Hwashin will continue to upgrade the human rights impact assessments with quantitative analysis and external validation, while also expanding its scope to include external stakeholders, such as suppliers, customers, and local communities, beyond the in-house employees. Through these efforts, Hwashin aims to strengthen its human rights risk response system across the organization and build a sustainable corporate culture that respects the human rights of all the stakeholders.

[Human Rights Impact Assessment Process]

[10 Key Human Rights Areas]

No.	Human Rights Area
1	Prohibition of discrimination and respect for diversity
2	Prohibition of workplace bullying and sexual harassment
3	Prohibition of forced and child labor
4	Guarantee of reasonable working hours and the right to rest
5	Assurance of occupational safety and the right to health
6	Guarantee of freedom of association and collective bargaining
7	Protection of personal information
8	Protection of customers' human rights
9	Impact on the local communities' human rights
10	Respect for human rights in the supply chain

Human Rights Management

Labor–Management Relations and Protection of Labor Rights

Hwashin fosters a healthy labor–management culture based on mutual respect for managerial rights and labor rights, in accordance with the fundamental principles of the Constitution and National Labor Relations Act. Building on this foundation, Hwashin pursues shared interests through communication and cooperation based on trust between labor and management for the sustainable operation of the organization. The company officially recognizes the establishment of labor unions and guarantees workers' rights to freedom of association and collective bargaining. It also operates consultative bodies to maintain and improve working conditions and protect workers' rights and interests. Each year, Hwashin engages in wage and collective bargaining negotiations with the labor union to ensure fair compensation and improve HR systems. In addition, regular Labor–Management Council meetings are held to hear and reflect diverse employee opinions and demands regarding the working environment, systems operation, and organizational culture. Through these ongoing dialogues and trust-based partnerships, Hwashin is committed to upholding workers' rights while jointly pursuing sustainable corporate growth. The company will continue to do its best to embed a culture of labor–management cooperation throughout the organization.

Award for Excellent Labor–Management Culture

Since the establishment of the labor union in 2008, Hwashin has maintained a tradition of zero labor disputes and has fostered a cooperative labor–management culture grounded in mutual growth and trust. In addition to regular communication between labor and management, the company operates the Labor–Management Council at all times to continuously improve the working environment, ensure job stability, and expand the employee welfare. As a result of these efforts made, in December 2024, Mr. Park Gyeom-hun, the head of Hwashin's labor union, was selected as a recipient of a government award for his contribution to an excellent labor–management culture and excellent labor–management-government cooperation. This recognition is a testament to Hwashin's commitment to human rights–centered management and the cultivation of a healthy organizational culture based on mutual trust and collaboration between labor and management.

Appointment of Grievance Handling Committee Members

To protect the rights of its employees and improve the working environment, Hwashin appoints grievance committee members, and has prepared and operates a structured grievance handling system. In particular, the company has established an institutional framework to respond promptly and fairly to a wide range of employee concerns, including unfair treatment, conflicts within the organization, and personnel-related issues that may arise during work. Hwashin appoints up to three grievance committee members, composed of labor and management representatives. These members are responsible for handling employee grievances within ten days of receipt and notifying the employee of the outcome. If the issue cannot be resolved by the committee, it is referred to the Labor–Management Council for joint consultation and resolution. In addition, the company strictly prohibits any retaliatory treatment against the employees who have raised the grievances or against the grievance committee members. Furthermore, the relevant departments are mandated to actively cooperate in matters necessary for resolving the grievances. Hwashin will continue to foster a working environment wherein the employee voices are respected and strengthen its human rights management system to ensure transparent and accountable responses to employee grievances.

[Industrial Medal for Contributions to an Excellent Labor–Management Culture]

Organizational Culture

Pursuit of a Horizontal Organizational Culture

Hwashin is committed to fostering a horizontal organizational culture grounded in autonomy and mutual respect among its members. Recognizing that traditional vertical and rigid communication structures can hinder internal collaboration and dialogue, the company has streamlined its position hierarchy and integrated and abolished job positions to create a more flexible communication environment. Through these efforts made, Hwashin aimed to eliminate unnecessary hierarchies and distance among the positions and foster an environment where all employees can freely express their opinions and be heard. Going forward, the company will continue to promote a horizontal organizational culture that values individual creativity and autonomy to build a healthy and dynamic workplace that encourages continued changes and innovation.

Internal Communication Programs

Hwashin operates internal communication programs designed to promote smooth communication among the employees and build consensus within the organization through various channels. As part of these efforts made, the company publishes an online newsletter, “Haneultari,” twice a year. This publication has become a key platform for information sharing and communication among the employees. The newsletter is produced by an internal reporting team composed of employees, who plan and write the content themselves—capturing a wide range of voices from across the organization. Once published, the newsletter is shared via the company’s in-house electronic bulletin board and Website, making it accessible to all employees as well as external stakeholders. These initiatives help strengthen interdepartmental understanding and promote a culture of open communication in the workplace.

Culture of Open Communication

Hwashin believes that a culture of communication built on trust between management and the employees is key to organizational sustainability and competitiveness. To promote open management and active two-way communication, the company is implementing a variety of initiatives. Each year, Hwashin holds a company-wide business environment briefing to transparently share major management performance results, shifts in the business environment, mid-to-long-term strategies, and key managerial tasks with the employees. A Q&A session between the executives and staff is included in these briefings to facilitate genuine two-way communication in an open atmosphere. To share the strategic direction and reinforce cross-organizational collaboration, Hwashin also conducts a business strategy workshop wherein all the executives participate. During the workshop, each division presents its priorities and execution strategies for the coming year and the participants engage in open discussions and collaborative problem-solving to strengthen inter-executive communication. Through these open communication efforts made, Hwashin builds organizational consensus, improves trust in the leadership, and promotes a culture of autonomous engagement. In the future as well, the company will continue to pursue a healthy organizational culture wherein every member is respected and meaningfully connected.

Organizational Culture

Work-Life Balance

Hwashin is committed to helping all its employees, without discrimination, and harmonizing their family life and work responsibilities by systematically operating programs and fostering a culture that supports work-life balance. The company distributes an internal manual outlining its support systems that cover every stage from pregnancy planning to childbirth and child-rearing. Institutional safeguards are in place to ensure that employees who use these benefits are not disadvantaged in performance evaluations or promotion timelines, allowing them to use the programs with confidence. In recognition of these efforts made to build a family-friendly corporate culture, Hwashin received the “Excellent Family-Friendly Company” certification from the Korean Ministry of Gender Equality and Family. In 2024, the company was also honored with the “Gyeongbuk Model Enterprise Award for Promoting Childbirth” from the Gyeongbuk PRIDE Company CEO Association. To commemorate these achievements and express appreciation to its employees for their hard work, Hwashin provided coffee trucks to its Eonhaa Plant, Bongdong Plant, and High-Tech Park Plant, creating an opportunity to further spread family-friendly values and culture across the organization. Hwashin will continue to enhance its systems and expand the work-life balance culture to enable its employees to enjoy both a sustainable career and a healthy personal life.

[Excellent Family-Friendly Company Certification]

[Coffee truck support]

[Programs Supporting Work-Life Balance]

Category	Program	Details
Pregnancy	Maternity protection during pregnancy	Work hours reduced by 2 hours a day between 12 and 36 weeks of their pregnancy
		Reassignment to easier duties during pregnancy
		Time allowance for prenatal checkups
Childbirth	Infertility treatment leave	Up to 3 days in a year (first day paid)
	Leave for miscarriage or stillbirth	Granted for 5-90 days depending on the duration of pregnancy
	Pre- and postpartum Leave	A total of 90 days (120 for multiple births)
		10 days of paid childbirth leave granted to spouse
Support for work-life balance	Childcare leave	Pregnant female employees; employees with children up to the age of 8 or up to second grade Within one year
	Reduced work hours During childcare period	1-5 hours a day
	Reduced work hours for family care	Any family member who requires an employee's care because of illness, accident, advanced age, etc.: work hours may be reduced by 15-30 hours a week.
	Family care leave	Any family member who requires an employee's care because of illness, accident, advanced age, etc.: Up to 3 months of leave per year
	Family care vacation	Any family member who requires an employee's care because of illness, accident, advanced age, etc.:
		Up to 10 days of leave per year

Creating a Happy Workplace

Diverse Welfare Programs

Hwashin operates a wide range of employee welfare programs that go beyond improving the working environment to actively support their overall quality of life. These programs are designed to help the employees and their families lead more stable and fulfilling lives by addressing various aspects of daily living, including health, children's education, housing stability, and retirement planning, rather than focusing solely on working conditions. Through these efforts made, Hwashin aims to enhance both the employees' quality of life and satisfaction with the workplace and engagement at work. Moving forward, Hwashin will continue to expand customized welfare programs tailored to different stages of employees' life cycle and strive to cultivate a healthy organizational culture rooted in trust and mutual respect.

[Welfare Benefit Programs]

Support for family life	Tuition support for employees' children and for employees pursuing master's or doctoral degrees / monetary support for family events (congratulations and condolences) / housing loans / livelihood support loans / Support for infants and children
Support for office life	Commuter buses / company cafeteria / company dinner expense support / Long-term employee bonus
Leisure support	Vacation expense support / recreational facility support / club activity support / special vacation for long-term employees / sports festivals
Medical support	Regular health checkups / comprehensive medical examinations for employees aged 40 and above / Focused management of employees with abnormal findings / company fitness center / antismoking clinic
Work-life balance	Work-life balance support programs / focused breaks / annual leave and other leave

Intracompany Clubs

Hwashin officially supports employee club activities to help staff achieve work-life balance and enjoy a happy workplace culture. By providing opportunities for members to naturally connect and interact based on shared hobbies and interests, the company enhances nonwork-related satisfaction and fosters a sense of camaraderie. As of 2024, Hwashin operated a total of 23 intracompany clubs, including fishing, hiking, baseball, futsal, and bowling. Employees are free to join any club of their choice after joining the company, and can relieve stress and engage in personal development through a variety of activities. Hwashin will continue to actively support these club activities and encourage the formation of new groups to ensure that all its employees enjoy a joyful and dynamic workplace.

Promotion of Smart Work

Hwashin continues to strengthen its digital collaboration infrastructure to help employees work more efficiently and flexibly. The company adopted Microsoft Teams, a company-wide cooperative work platform, to not only share work schedules and materials, but also reduce unnecessary meetings and mundane work of reporting tasks using video conferencing. This has allowed the company to shape a flexible work environment that allows its employees to wok anytime, anywhere without physical restraints. We also provide Virtual Desktop Infrastructure (VDI) solutions that support the employees to comply with security protocols and work stably from anywhere, whether in the office, during business trips, or at home.

Creating a Happy Workplace

Reward System Operation

Hwashin expresses its gratitude for the efforts made by and dedication of each and every employee and operates various morale and motivation boosting programs to foster a healthy organizational culture. Every year, during the company's anniversary celebration, outstanding employees who have demonstrated exceptional achievements and served as role models within the organization are selected and awarded. In addition to formal recognition, practical rewards such as opportunities for overseas training are provided to boost their morale. Furthermore, to reinforce respect and appreciation for long-serving employees, the company offers monetary rewards and the right to special vacations based on their years of service, thereby encouraging long-term commitment. These programs go beyond mere recognition; they play a key role in building a strong sense of identity and ownership and in reinforcing the feeling that they are growing together with the company.

Retiree Roundtable

Hwashin holds an annual retiree roundtable to express sincere gratitude to employees who have dedicated themselves to the company until their retirement age. This event serves as a meaningful occasion to honor the contributions and experiences of long-serving members, offering warm encouragement and a heartfelt farewell to support a positive conclusion to their career journey. Such initiatives reflect Hwashin's people-centered management philosophy, which emphasizes respect and consideration throughout the entire span of an employee's working life. They also contribute to building a workplace where all members feel valued, trusted, and inspired to stay.

Spaces for Rest and Culture to Support Emotional Well-Being

To create a working environment wherein employees may enjoy moments of relaxation in their daily routine, Hwashin is actively investing not only in office spaces, but also in spaces dedicated to rest and cultural engagement. Within the company, a variety of spaces—including an in-house café, lounge areas for resting, and a library—are available for employees to recharge freely during the workday and to inspire creativity. The in-house café, in particular, serves as a space for employees to enjoy coffee and drinks while engaging in casual conversations, which help break down barriers between departments and foster an open organizational culture. The library and reading spaces offer opportunities for both self-development and emotional relaxation, thereby supporting the employees to independently acquire knowledge and information. These multipurpose cultural spaces go beyond basic welfare; they are strategically designed to enhance the emotional well-being and overall quality of life of the employees. Moving forward, Hwashin will continue to improve the working environment with a focus not only on the employees' physical health, but also their emotional satisfaction, to build a truly sustainable and happy workplace.

Operation of a Company Workers' Welfare Fund

Hwashin has operated the Company Workers' Welfare Fund, established in 2003, for the stabilization of employees' lives and enhancement to their welfare. At the time of its establishment, the company contributed KRW 550 million to launch the fund. Through consistent asset management, the fund has grown to a total asset value of KRW 3.558 billion, including KRW 3.199 billion in permanent property and annual mean interest earnings and loan interest earnings of about KRW 90 million as of the end of 2024. The fund is managed with a strong focus on its core mission—improving the actual quality of life of the employees. It is actively used to support quarterly intracompany club activities, company sports events, and other programs that boost the morale and strengthen the organizational culture. Hwashin remains committed to continuously using the fund to identify practical and sustainable benefits that reflect the diverse needs of the employees and create a truly happy workplace that satisfies all the employees through the fund's transparent and efficient management.

Safety and Health Management

Environment, Safety, and Health (ESH)

Hwashin systematically analyzes and assesses the environmental (E), safety (S), and health (H) risks throughout the entire product life cycle—from design and development to production, usage, and disposal. Through company-wide risk assessments, Hwashin identifies high-risk processes and worksites and establishes focused management systems to proactively mitigate the risks. In particular, employees at the Eonha Plant, Bongdong Plant, High-Tech Park Plant, and Yesan Plant are actively engaged in company-wide efforts to prevent accidents and create safe and healthy working environments based on the company’s EHS management policy. It is a fundamental principle that all the employees be familiar with and practice the policy. Hwashin’s EHS management policy serves as a core guideline for ensuring corporate sustainability and protecting workers’ health. The company continuously evaluates and improves the policy’s effectiveness and relevance through regular internal inspections and reviews. Furthermore, by transparently disclosing the management policy to its stakeholders, Hwashin clearly demonstrates its commitment to continuously improving the EHS areas and fulfilling its social responsibility. The company will continue to minimize ESH risks throughout its business activities and not only comply with the relevant laws and regulations, but also enhance its autonomous management capacity to build a sustainable safety culture and a healthy working environment.

Ensuring Independence of Safety and Health Budgets

To systematically manage safety and health risks at its worksites, Hwashin has established a separate safety and health account to ensure that the allocated budget is used exclusively for safety and health purposes. This systematized management structure prevents safety and health investments from being subordinated to general operating expenses, thereby enhancing the effectiveness of activities pursued to prevent accidents and improve the working environment. In addition, Hwashin regularly compiles and reviews the results of the safety and health budget allocation and execution to evaluate the appropriateness of the expenditures and execution rates. Based on this process, the company allocates the budgets flexibly, prioritizing according to the risk level of each worksite. Hwashin continues to make efforts to secure reasonable budgets that reflect the actual needs at each worksite.

Safety and Health Management

Safety and Health Management Organization and Activities

Hwashin has established a dedicated organization for safety and health management. The company ensures the proper placement of legally required personnel, including a general manager of safety and health, safety manager, health manager, and management supervisor. These employees are fully aware of their duties and roles according to their positions and carry out safety and health activities at worksites in accordance with established procedures. As such, Hwashin works to proactively prevent hazards at worksites and maintain a safe working environment. In addition, Hwashin has established the Occupational Safety and Health Committee for labor and management to hold meetings and jointly identify risks at worksites every quarter, as well as actively discuss and implement improvement measures and solutions. Hwashin will continue to practice safety and health management by fostering an autonomous safety keeping culture.

Safety and Health Management

Safety and Health Training

To enhance employee awareness of safety and strengthen their accident prevention capabilities, Hwashin operates a systematic safety and health training program every year. The training is conducted in compliance with relevant laws, such as the Occupational Safety and Health Act and the Serious Accidents Punishment Act of Korea, and includes all mandatory topics. Its primary goal is to improve practical on-site safety management skills. Furthermore, Hwashin conducts regular safety and health training, special safety and health training, other legally mandated job-specific training, and supervisor training to continuously raise awareness of safety among the employees and cultivate a culture wherein the individuals voluntarily practice safety. Training is offered through various methods, including online and in-person sessions. Completion rates and training effectiveness are regularly evaluated to ensure the program's impact. Hwashin will continue to strengthen its system for practical safety and health training and expand the training contents to deeply embed a company-wide culture of safety.

[2024 Safety and Health Training Completion Rate]

Type	Target	Completion Rate
Regular safety and health training	All employees	100%

Safety and Health Management

Strengthening Supervisor Activities and External Safety Training

To prioritize the protection of workers' lives and health, Hwashin held the "Industrial Accident Prevention Proclamation Ceremony" in 2022, with the full participation of all the staff, including the CEO. This marked the company's first substantial step toward preventing serious industrial accidents. Since 2023, Hwashin has launched a full-scale effort to enhance on-site safety and health activities, focusing on supervisors. The company has clearly defined the job assignments, responsibilities, and authority of the supervisors and has implemented initiatives led by team leaders and chiefs—who serve as key frontline figures—to directly identify risk factors and carry out corrective measures. To further promote participation and engagement, Hwashin has introduced an incentive program for the supervisors. Additionally, the company is enhancing the safety awareness of the supervisors and workers through external safety training programs organized by local governments. Moving forward, Hwashin will continue to enhance its proactive risk management system centered on the supervisors and expand effective training and participatory programs to foster a deeply rooted safety culture at the field level.

[Supervisor activity awards ceremony in 2024]

[Special lecture by the director of the Daegu Regional Employment and Labor Office]

Fire Safety Training and Comprehensive Drills

Hwashin operates a structured fire safety education and training system to ensure prompt and effective responses to fires and emergency situations at its worksites. The company has established internal fire response units and conducts regular in-house fire drills twice a year. These drills are designed to strengthen the initial response capabilities and ensure the proper execution of evacuation procedures in the event of a fire. The training is scenario-based, tailored to the actual situation of each fire unit, and focuses on improving the workers' response skills and checking the effectiveness of the emergency response system. Additionally, Hwashin conducts joint fire drills and fire safety training with the local fire department once a year to strengthen cooperation with related agencies and enhance the workers' practical response capabilities. Any improvements identified during the joint drills are promptly reflected to minimize safety blind spots at the workplace. Hwashin will continue to reinforce proactive, prevention-oriented safety management and ensure that all employees are equipped with the practical skills necessary to respond to fires and other emergency situations through ongoing education and training.

Safety and Health Management

Activities to Foster a Culture of Safety and Health

At Hwashin, safety and health are not treated as mere guidelines but as values that naturally become part of the daily lives of our employees. To this end, we run a variety of participatory safety culture programs. In 2024, we collaborated with external organizations, such as the Yeongcheon Community Health Center, Mental Health Welfare Center, and partner dental clinics, to offer diverse engaging and experiential events. These included games that provided health information, stress management sessions, and oral health programs that employees could experience firsthand. These activities aim to create an environment wherein the employees can access health and safety information in a more familiar and engaging way. Additionally, we launched the “Walk Challenge” to promote regular walking habits, encourage employees to practice self-care, and foster a healthier working environment. We also hosted a “Punch King Event” to relieve stress, allowing employees to unwind and enhance their emotional well-being. Hwashin will continue to expand hands-on, experience-driven safety culture activities that encourage voluntary participation in order to build an organizational culture wherein all the employees may work joyfully and healthily.

Operation of Physical Therapy and Health Management Spaces

Hwashin operates physical therapy and health management facilities in workplace infirmaries to help the employees effectively alleviate fatigue and physical discomfort that may occur during work and to encourage their self-care. Each infirmary is equipped with various treatment and health monitoring devices, including low-frequency treatment equipment, infrared treatment equipment, paraffin treatment equipment, air-pressure massagers, InBody analyzers, and blood pressure monitors. These facilities are open to all employees at any time during working hours for physical recovery and health status checks. These devices are especially effective in relieving fatigue and easing minor pain or tension in working environments that place significant strain on the musculoskeletal system. In addition, a full-time certified nurse is stationed in each facility to guide employees to safely and accurately use the treatment devices according to established procedures and standards. The nurse also provides health consultations, enabling the early detection of and response to symptoms and preventive care. Hwashin goes beyond simply providing treatment devices and continuously expands the provision of medical equipment and programs in consideration of the unique characteristics of each workplace and the specific health risk factors faced by the workers. We are enhancing our workplace health management system through integrated efforts such as intensive follow-up care for individuals with abnormal findings, musculoskeletal risk factor preventing activities, noise-induced illness prevention, and programs to prevent hazards in confined spaces. Additionally, we are exploring the future provision of personalized health management solutions. Hwashin remains committed to building a healthy workplace and proactive health management system by making continuous investments to enable the employees to fully focus on their work while in optimal condition.

Safety and Health Management

Promotion of Employee Health

Hwashin operates a comprehensive health management program based on the belief that the physical and mental well-being of its employees is the foundation for sustainable corporate growth. All employees undergo annual regular health checkups, and special medical examinations are conducted before and after job assignments as well as at regular intervals to assess and manage their health conditions in relation to the working environment, both proactively and through follow-up care. In particular, Hwashin provides comprehensive medical examinations for employees aged 41 and older and their spouses to support their early diagnosis of diseases, improve their disease survival rates, and promote the health of their families. In addition, regular assessments of harmful factors in the working environment are conducted to evaluate worker exposure to them and develop improvement measures. A wide range of workplace-specific health protection activities are also widely implemented, including musculoskeletal hazard factor assessments, follow-up care for individuals with abnormal findings, hearing conservation programs, and confined space safety management programs. Hwashin will continue to strengthen its scientifically grounded and prevention-centered health management system to create a working environment wherein all the employees can work safely in their optimal health condition.

Creating Value in the Local Community

Wooseek Scholarship and Culture Fund

In 2005, Hwashin established the Wooseek Scholarship and Culture Fund to meet its social responsibilities consistently and systematically. Rooted in Hwashin's founding philosophy of people-centered growth and sharing, the foundation focuses on contributing to the local community and nurturing future generations through the balanced development of education and culture. Each year, the Fund annually runs scholarship programs for youth and college students, along with cultural and artistic initiatives and community contribution activities. The foundation provides meaningful support to promising individuals who pursue their dreams without losing hope or courage despite financial hardships and helps them focus on their studies. It also offers a range of opportunities to the selected scholarship recipients for them to grow into leaders who can contribute not only to their local communities, but also in Korea and globally. Since its founding, the fund has continually expanded both the scale of its scholarships and the number of beneficiaries, thereby contributing to the reduction of educational inequality and fostering a virtuous cycle of talent development in the local community. Hwashin will continue to deliver messages of hope to more students and neighbors through the foundation's activities and thus fulfill its role as a responsible company growing together with the local community.

Information Protection

Information Protection Directions and Policy

Hwasin recognizes the protection of sensitive information, such as its employees' personal information, customer information, and trade secrets acquired in the course of its business activities, as a critical corporate responsibility. Accordingly, the company is advancing its information security framework while simultaneously strengthening employee awareness of security practices. Hwasin strictly complies with relevant laws and security regulations and systematically updates and enforces internal regulations, including its information security management standards and IT security incident response guidelines. These efforts help establish a solid foundation to respond effectively to various threats, such as information leaks, system intrusions, and information loss. To proactively address the growing sophistication of cybercrimes such as hacking and ransomware, Hwasin regularly conducts security training programs. These include response procedures for different types of cyberattacks and self-diagnosing methods for personal computers. These training sessions play a key role in raising security awareness among all the employees and preventing real-world damages, while also promoting a culture of voluntary information protection. Looking ahead, Hwasin will continue to enhance both its technical and administrative response system to build its information protection capacity and implement responsible information protection policies that uphold the trust of its customers and employees within a sustainable business environment.

Information Protection Certification and Management

Hwasin is actively pursuing and maintaining external information protection certifications to establish a globally recognized information protection system and earn the trust of its customers and stakeholders. In particular, the company has acquired certifications such as Trusted Information Security Assessment Exchange (TISAX), which sets the information protection standards for the automotive industry, and Hyundai Information Security Management System (H-ISMS), which meets the Korean information protection management standards. Through these certifications, Hwasin systematically manages its overall information protection standards—including security policies, infrastructure, and management systems. These are not one-time achievements; rather, they are renewed and managed through regular security checks, documentation reviews, and evaluations of the adequacy of physical and technological safeguards. This approach ensures that the company remains flexibly responsive to the ever evolving cyber threats. Moving forward, Hwasin will continue to build its company-wide information protection capacity to maintain information protection standards that meet the global standards and ensure the safe protection of sensitive information that belong to its customers, suppliers, and employees.

Information Protection

Elevating Information Protection Awareness

Hwashin operates a company-wide information security training system under the principle that the foundation of information security begins with employee awareness and practices. Each year, a security officer is selected within each team to undergo primary security training. These selected officers then play a key role in promoting security practices throughout the organization. Through in-team cascade

training, Hwashin ensures that all employees understand and can apply core security principles. This structure helps raise the overall level of security awareness across the organization and supports the establishment of a security culture tailored to each department's unique characteristics. The training curriculum includes practical content such as personal data protection, email security, precautions for file sharing, and how to respond to ransomware and phishing attacks. The goal is to empower employees with the capability to proactively respond to security threats. Hwashin will continue to strengthen its development of security leaders and systematic training management to foster a prevention-focused security culture and enhance the company's sustainable information security management standards.

[Company-Wide Information Security Training]

Strengthening Internal System Security

To enhance security when accessing internal systems such as the Knowledge Management System (KMS) and Human Resources System (e-HR), Hwashin has introduced a mobile OTP-based double-layer authentication. Prior to the implementation, employees were provided with guidance on how to use the OTP system and adhere to security protocols. This initiative prevents account theft and unauthorized access, reinforcing the protection of internal information assets.

Simulated Training for Enhancing Response to Cybersecurity Threats

To prevent cybersecurity incidents in advance and enhance employees' response capabilities, Hwashin conducts phishing email simulation training twice a year—in the first and second halves of each year. The training uses realistic scenarios based on possible actual phishing threats, such as emails impersonating concert ticket promotions or well-known online retailers, which are contents that employees can easily fall for. These simulated attacks are sent to staff members to assess their awareness and responsiveness to security risks. In the training conducted during the second half of 2024, the information leak rate among the participants was approximately 4%, marking a 9% improvement compared to the first half of the year. Moving forward, Hwashin plans to diversify its simulated attack scenarios and concurrently enhance its security awareness training. Through these efforts made, the company aims to continuously strengthen the cybersecurity response capabilities of each employee and ultimately achieve a "zero percent" infection rate from cyberattacks.

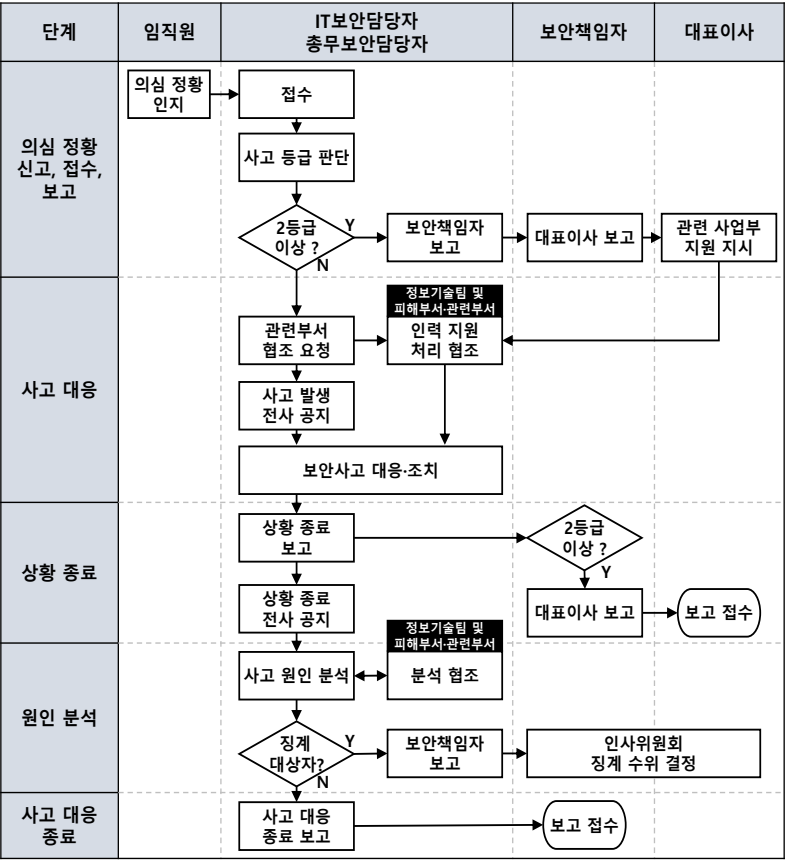

Installation of Company-Wide Security Solutions

Since 2022, Hwashin has deployed the next-generation security solution "SentinelOne" company-wide. This solution enables real-time monitoring of the activities within the system, such as files, processes, and memory of users. It can immediately identify causes and take measures to detect malicious code or hacking, and the security solution cuts off potential incidents that may occur in the company.

Information Protection

Security Incident Response Procedures

Hwashin has established and operates a company-wide security incident response procedure to ensure swift and systematic handling of security breaches. Each response phase is clearly defined, and a collaborative system among the relevant departments has been put in place to effectively respond to various threats, including information leaks, malicious code infections, and system intrusions.

Personal Information Protection System

Pursuant to Article 28 (2) of the Personal Information Protection Act of Korea, Hwashin operates a structured training and control system to ensure the appropriate handling and safe management of personal information. At least twice a year, training is provided to personnel handling personal information, the selected information protection officers, and departmental security representatives to raise awareness and strengthen the employees' practical capabilities in protecting personal information and preventing breaches. Additionally, there are regular inspections to determine whether the proper technical and managerial safeguards of personal information are being taken to continuously maintain a secure management system in line with the legal requirements and internal regulations. Furthermore, only designated personnel are granted system authorization regarding access to personal HR information to prevent the misuse or leakage of personnel information. These personnel are requested to sign a pledge of HR information protection annually as part of our measures to protect personal information. Hwashin will continue to protect the valuable information of its employees and customers based on a responsible approach to personal information protection and the ongoing operation of an effective, real-world information management system.

Shared Growth

Shaping a Culture of Shared Growth

To establish an order of fair trade and to prevent risks that may arise in contracts and transactions, Hwashin has formulated and adheres to four principles. We hold exchanges with suppliers about their general management activities and provide systematic and practical support, including the technical, training, and financial, to build their safety management capacity and business stabilization in order to shape a culture of shared growth.

[Four Action Points for Fair Trade and Shared Growth]

Action Point for Good Contracts	Present matters for mutual compliance in transactions
Action Point for Fair Supplier Selection (Registration)	Enhance transparency and fairness in supplier selection and operation of supplier pool
③ Action Point for the Establishment and Operation of the Subcontracting Transaction Internal Review Board	Review the fairness and legality of subcontracting transactions between suppliers in advance
④ Action Point for Good Practices in the Issuance and Retention of Documentation in Subcontract Transactions	Promote a practice of issuing advanced documentation in subcontracting agreements and transactions between suppliers

Supplier Code of Conduct

Hwashin has enacted a Supplier Code of Conduct and posted it online for its internal and external stakeholders to view it and effectively respond to supply chain risks through the establishment of a sustainable supply chain. Suppliers who provide goods or services to Hwashin throughout the supply chain are advised to comply with the Code. The substance of the Code of Conduct subdivides into four major areas of ethics, environment, labor/human rights, and safety/health, along with relevant implementation guidelines and conduct guides in the workplace.

Top score in evaluation of fair trade pact implementation (six consecutive years)

HWASHIN is subject to annual implementation evaluations by the Korea Fair Trade Mediation Agency and the Fair Trade Commission and was awarded the top score level for six years from 2019 to 2024 in recognition of its efforts made to establish an autonomous order of fair trade and promote a culture of coexistence and cooperation.

Shared Growth

Technical Support

Hwashin provides technical support to suppliers experiencing difficulties from worsening outcomes and shortfall of expert personnel, making joint efforts to help suppliers secure sustainable technological capabilities. In 2024, Hwashin supported improvements in production methods, as well as ingredient yield rate improvements of mass-produced and new vehicles, to enhance supplier profitability. Additionally, the company is implementing various improvements to help stabilize supplier production in the workplace.

[Supplier Technical Support Amount by Year]

Severe Heat Season Support

Hwashin annually engages in activities to boost morale and prevent heat-related injuries in our suppliers who toil through the hot summers. Based on feedback from its suppliers, Hwashin directly provides supplies that are needed at worksites. In 2024, ice makers were distributed as part of the heatwave relief supplies. In this way, Hwashin will continue creating healthy and safe working environments for our suppliers' employees and stronger relationships with them.

Safety and Health Support

Hwashin places the health and safety of its supplier employees as a top priority and actively supports the prevention of industrial accidents and the integration of safety management systems within its partner companies. To proactively respond to the increasingly stringent safety and health regulations, such as the Serious Accidents Punishment Act of Korea, Hwashin conducts regular safety and health inspections for its suppliers every year. In 2024, joint inspections covering safety and fire hazards, forklift checks, and risk assessment support were carried out with the suppliers. These initiatives aimed to help them establish their own internal safety and health management systems and build their capacity to prevent worksite risks. The company also continues to provide worksite monitoring to identify and address potential hazards before they occur. Personal protective equipment (PPE), such as safety gloves and helmets, are regularly supported for its suppliers to prevent accidents in advance. Hwashin promotes the horizontal sharing of best practices in occupational safety and health among its suppliers to raise their overall safety standards. For suppliers that achieve zero-accident records, the company presents plaques and small awards to encourage the continued cultivation of a zero-accident culture. Moving forward, Hwashin will further strengthen its safety and health monitoring system, expand training and communication with its suppliers, and build their capacity to respond to risks. Through these efforts, the company aims to build a safety-centered, sustainable supply chain ecosystem together with its suppliers, with the ultimate goal of achieving "ZERO" serious and industrial accidents.

[Accident-Free Supplier Award]

Shared Growth

Training and Personnel Support

With the firm conviction in recognizing suppliers' competitive edge as its own, Hwashin plans and undertakes various training programs annually for capability development and developing top talent within our suppliers. In 2024, training sessions were held for key partners not only on job-specific topics such as production technology and quality, but also on safety using VR technology. If a supplier needs assistance with quality or productivity enhancement, we provide support through our expert personnel for fundamental solutions required by the suppliers up until increased profitability.

2024 Training Programs

1. Technical Training
 - ROBOT elementary/intermediate level, PLC training
2. Safety Training
 - VR safety simulation training
 - Special safety lectures & seminars
 - Special lecture on safety leadership
3. Other
 - Supplier Global Coexistence and Cooperation Center

Personnel Support

1. Quality Improvement Activities
 - Quality improvement activities
 - Refurbishment of worn-out molds and process improvement
2. Productivity Stabilization Activities
3. Profitability Improvement Activities
 - PRESS process improvement, optimization of raw material yield, improvement in welding lines, cycle time (C/T) reduction

Financial Support

To resolve suppliers' funding difficulties and enhance their financial solvency and stable growth, Hwashin has partnered with Daegu Bank to operate the Shared Growth Fund. Since signing the working-level pact with Daegu Bank in 2013, Hwashin has supported interest costs when suppliers take out loans for operation funds, which enables them to save on financial costs and facilitates the procurement of business funds for stable supply chain operations. Hwashin also contributes about KRW 22.5 million every year to the Large, Medium and Small Enterprises Agriculture and Fisheries Foundation to provide steady support in masks, hand sanitizers, self-diagnosis kits, and safety gear since the COVID-19 pandemic. We also plan to provide a range of support to enhance our suppliers' competitiveness and resolve wealth concentration.

Raising Prices to Align with Raw Material Unit Price Increases

Hwashin swiftly raises and pays suppliers subcontracting prices every year to adapt to raw material unit price fluctuations. Recent events, including the COVID-19 pandemic and the Ukraine–Russia War, destabilized the global supply chain, causing raw material prices to skyrocket. To prevent the raw material unit price increase from burdening suppliers, Hwashin immediately raises prices appropriately to improve suppliers' management environment. This initiative is part of Hwashin's ongoing efforts to improve the business environment for its partner companies. In recognition of our efforts, we received a citation from the Korean Minister of SMEs and Startups in 2022.

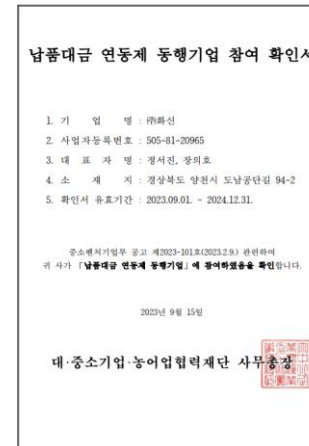

[Korean Ministerial Award for the Supply Payment Linkage System]

[Amount of Increase in Raw Material Unit Prices by Year]

Supply Payment Linkage System Win-Win Corporation

Hwashin has implemented voluntary supply payment linkage since before its enactment as law, marking up supply payments to align with increases in raw material unit prices compared to the time of contract execution to resolve supplier burdens. Since the government implemented the Supply Payment Linkage System as law in 2023, we have chosen to participate in advance as a “Supply Payment Linkage System Win-Win Corporation.” Hwashin informed major suppliers about its plan to implement the system, provided relevant training ahead of implementing the system, and discussed with them the problems and difficulties that may arise from linked contracts. In conclusion, Hwashin will encourage the participation of consigning and consigned corporations to promote the system, and will continue building a culture of shared growth and coexistence along with it.

Autonomous Compliance Review Committee Meeting

Hwashin seeks to establish a fair subcontracting order by reviewing the fairness and appropriateness of subcontracting transactions. To this end, the departments involved in subcontracting transactions regularly hold Autonomous Compliance Review Committee meetings. We seek to prevent potential risk by seeking consultation from expert attorneys and the autonomous compliance manager regarding issues arising from each team's internal review.

Coexistence and Cooperation / Subcontracting Law Training

To shape a culture of fairness with suppliers, Hwashin annually distributes lesson plans and implements training for the involved departments. The lesson plans include matters such as an overview of fair trade and enforcement trends, the subjects and types of subcontracting laws, regulations, and sanctions for violations to provide basic education on subcontracting laws. In addition, we share cases and hold Q&A sessions with advisory attorneys in order to establish a corporate culture of coexistence between Hwashin and its suppliers.

Enhanced Communication with Suppliers

To strengthen relations with suppliers and establish a culture of shared growth where lines of communication are open for any issues, Hwashin implements various programs to enhance communication. Each year, Hwashin officers and employees conduct exchange meetings with suppliers' plant managers and cooperation meetings with supplier representatives, operating multifaceted communication channels to listen to voices on the ground and resolve any issues. Hwashin will continue operating various communication enhancement programs to empathize with and resolve supplier issues for a sustainable partnership with side-by-side growth.

Governance

Enactment of the Corporate Governance Charter

Hwashin has established a Corporate Governance Charter to promote transparent and accountable management and to enhance long-term corporate value. This Charter clearly defines the roles and responsibilities of the Board of Directors, its oversight of management, and the principles of ethical business conduct to ensure the company's long-term growth and the protection of stakeholder interests, including its shareholders. Based on the Charter, Hwashin is committed to forming a Board that is both professional and independent, and to actively supporting responsible management by ensuring the efficient operation and robust supervisory functions of the Board. Through these efforts made, Hwashin aims to achieve both sustainable corporate growth and increased shareholder value, while establishing a governance system that earns the trust of society. Moving forward, Hwashin will continue to enhance and embed its corporate governance to promote greater management transparency and become a company trusted and respected by all its stakeholders.

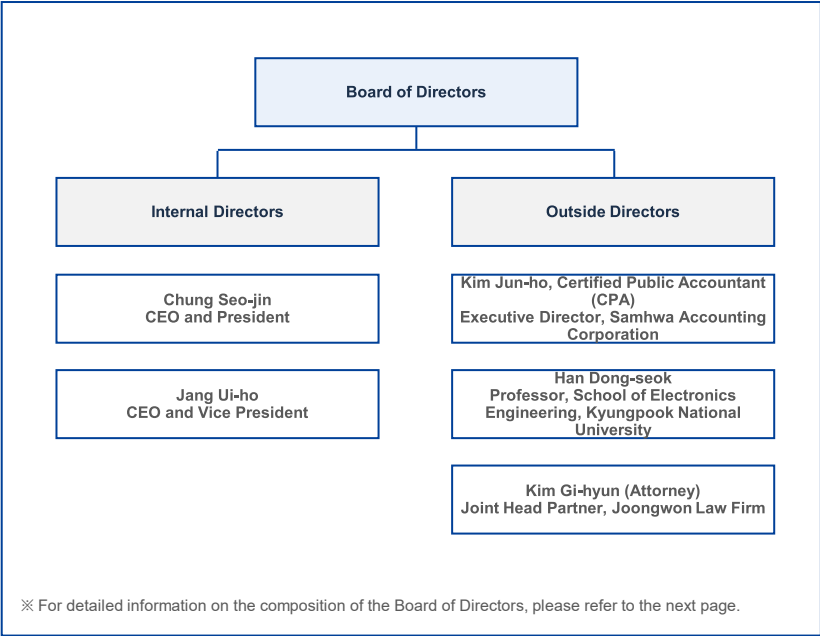

Board of Directors-Centered Management

To maintain a sustainable management system, Hwashin has a Board of Directors as the company's top decision-making body to hear the opinions of all its stakeholders, including its shareholders, and to advance the protection of their interests and transparent, effective management. We always strive for profit maximization and to meet corporate social responsibilities by regularly conducting board meetings on a quarterly basis, as well as ad hoc meetings as needed. Through this structure, Hwashin ensures that the Board functions not as a formal entity, but as a body that plays a practical role in management oversight and advisory.

Composition of the Board of Directors

Hwashin's Board of Directors consists of five directors. To ensure a responsible decision-making system based on expertise and transparency, the Board comprises two internal directors and three outside directors. Each director brings industry insight and management expertise, based on which they review and make decisions of key strategic and business matters. The CEO serves as the Chair of the Board, presiding over meetings and leading the decision-making process. Moving forward, Hwashin will continue to strengthen the independence, expertise, and diversity of its Board of Directors in order to support sound governance and sustainable corporate management.

[Composition of the Board of Directors]

Governance

Independence of the Board of Directors

To enhance the independence and transparency of the Board of Directors, including outside directors, Hwashin transparently discloses all director information to the General Meeting of Shareholders prior to appointment. This includes the external disclosures of the nominator's identity, the relationship between each candidate and the largest shareholder, details of the person's transactions with the company, etc., to clearly externally communicate all factors that may affect a director's independence, including information on any potential conflicts of interest. Although Hwashin is not legally required to establish a committee for recommending candidates for outside directors as a listed company with gross assets of less than KRW 2 trillion, pursuant to Article 542-8 of the Commercial Act of Korea, the company rigorously maintains a thorough review process to ensure fairness and objectivity in director appointments. Going forward, Hwashin will continue to strictly uphold the independence of its Board of Directors, including its composition and operation, and make improvements to build a governance system that earns the trust of all its stakeholders.

Board Expertise

Hwashin continuously works to strengthen the expertise and capacity building of its Board members to ensure effective business management oversight and strategic decision-making. As part of this effort, the company provides annual training for the Board members on topics such as corporate governance principles, Audit Committee's structure, function, and activities, internal accounting management systems, and the role of the Audit Committee. Moving forward, Hwashin will continue to enhance the individual expertise of its directors and remain committed to steadily training and building their capacity to further advance a sustainable governance framework.

Director Remuneration and Compensation

Hwashin operates a fair and reasonable compensation system that aligns with the responsibilities and roles of its Board members. Director compensation is executed transparently at a level that reflects accountability to the shareholders and contributes to the company's sustainable growth. Director remuneration is determined by individual consultation every year by taking into account various factors, such as the importance of duties, scope of responsibility, expertise, and performance contributions. The remuneration of both internal and outside directors is executed within the amount limits approved by the general meeting of shareholders. This approach ensures both shareholder rights protection and transparency of compensation. Hwashin regularly discloses matters related to director remuneration through its business reports and general shareholders' meetings. Moving forward, the company will continue to review and improve the appropriateness and fairness of the remuneration, thereby operating sound governance that supports the Board's independence and responsible corporate governance.

Shareholder-Friendly Management

Returns-to-Shareholder Policies

In pursuit of our goal of maximizing shareholder interest, we implement dividends and other measures as a major means of returning part of the corporate profits to our shareholders. Based on the Articles of Incorporation, dividends are executed based on the resolution of the Board of Directors and approval of the General Meeting of Shareholders. At the Board meeting held on May 20, 2024, Hwashin resolved to adopt a mid- to long-term dividend policy aimed at securing dividend visibility and stability for the 3 fiscal years starting from 2024. Under this policy, the company will flexibly maintain a dividend payout ratio of approximately 7% based on the annually consolidated net profit for the current period. Details of the policy have been published on the Hwashin website (ESG > Returns-to-Shareholder Strategy > 5-Year Dividend Information). Guided by this policy, Hwashin plans to balance investment for future growth with enhanced shareholder value when executing dividends.

Operating Principles of the Returns-to-Shareholder Policies

- 1. Hwashin distributes the settlement dividends based on resolutions adopted at the General Meeting of Shareholders in accordance with its Articles of Incorporation.
- 2. The scale of the dividends is determined by taking into consideration future investments for the company’s continued growth, business performance, and cash flow conditions.
- 3. Matters pertaining to dividends are notified in advance through public notice of dividend decisions in cash and in kind and by digital public notice (DART) up to two weeks before a regular General Meeting of Shareholders. The confirmed dividend amount is announced on the day of approval by the General Meeting of Shareholders through the “disclosure of the results of the regular General Meeting of Shareholders.”

Shareholder-Friendly Management

Holding of Regular General Meetings of Shareholders

Hwashin holds a regular General Meeting of Shareholders every year and has implemented an electronic voting system starting from the 47th Regular General Meeting of Shareholders in 2022. On March 28, 2024, Hwashin held its 49th Regular General Meeting of Shareholders. Many shareholders attended the meeting and expressed their views, and Hwashin pledged to become a company trusted by its shareholders and stakeholders. Going forward, we will continue to actively communicate with our shareholders and the market through the General Meeting of Shareholders.

Risk Management

Internal Control System

Hwashin's three main goals are the efficiency and effectiveness of corporate management, trustworthy financial reporting, and compliance with applicable laws and policy. As part of our efforts made toward the second goal, we operate internal accounting controls to give reasonable confidence that the company's financial statements were prepared and disclosed in accordance with generally accepted accounting principles. With the application starting in 2023 to listed company headquarters with at least KRW 2 trillion in total assets (stage-by-stage application differs by amount of total assets) and even consolidated subsidiaries, we are performing management diagnostics of overseas branches subject to consolidation and responding to the implementation of consolidated internal accounting control systems. Recognizing the limits of managing and supervising operational risks in overseas branches with internal accounting controls alone whose purpose is to secure the trustworthiness of financial reports, we are expanding the management and supervision functions of headquarters with internal controls.

[Internal Control System's Implementation Road Map]

[Status of Internal Control Activities]

Categ ory	Details	2022	2023	2024
Internal auditor	Number of business sites subject to audit (in Korea/overseas subsidiaries)	5	5	5
	Number of audited business sites (in Korea/overseas subsidiaries)	1	3	3
	Audited rate of business sites	20%	60%	60%
Inspection activities	Number of regular Inspections	1	3	3
	Number of ad-hoc inspections	0	0	0
	Reports and transparency investigations via cyber reporting, phone, mail, etc.	0	0	0

[Risk Management Process]

Internal Accounting Management System

Hwashin operates an efficient internal accounting management system for the advanced prevention of errors or fraud that may distort financial statements during preparation and disclosure. The CEO evaluates and reports the status of internal accounting design and operations to the General Meeting of Shareholders, the Board of Directors, and the Audit Committee. The Audit Committee conducts its own independent evaluation, and an independent outside auditor provides a review or audit opinion pursuant to the "Internal Accounting Management System Design and Operation Concept Framework," disclosing the effective design and operation of this system from the standpoint of importance.

Tax Risk Management Framework

As policies and the economic environment surrounding the automobile industry continue to change rapidly, managing related tax risks has become a critical task for sustainable management. Accordingly, Hwashin conducts regular annual reviews of tax issues. The company collects, utilizes, and analyzes key information such as tax authority issues, interpretations and applications of revised tax laws, and major tax rulings. Through these efforts made, Hwashin establishes response strategies not only to reduce tax risks in Korea, but also to address international taxation risks. Matters related to tax payments are reported to management based on the type and importance of the tax. Hwashin does not operate any subsidiary for the purpose of tax avoidance. As a Tier-1 automotive vendor, it owns consolidated overseas subsidiaries in countries such as the United States, India, Brazil, and China, aligned with the overseas expansion of its client companies. Furthermore, to comply with the Adjustment of International Taxes Act of Korea, Hwashin applies reasonable arm's length pricing methods for transfer pricing transactions with its overseas subsidiaries.

Tax Risk Management

The core of Hwashin's tax risk management is "strict compliance with laws and regulations." We maintain relations of transparency with tax authorities and provide proof of relevant facts on request. As a global corporation, we are aware of differences among national tax legislations and work to prevent tax risks ahead of time. The company recognizes the risk of double taxation in transfer price transactions as tax authorities compete over tax authorization and are making efforts to resolve the issue by formulating reasonable standard price calculation methods consistent with domestic tax laws and transfer price guidelines by transaction type in international transactions with our overseas branches. We are also providing support from headquarters in good faith for the taxation obligations of corporate taxes, etc., at the overseas subsidiaries based on their national tax laws and the obligation to submit various materials required by the competent national taxation authorities.

Tax Strategy

We are aware that complying with tax laws and managing taxation risks are crucial for maximizing shareholder interest and meeting our corporate social responsibility (CSR) through contribution to the national budget and that these are fundamental to our sustainable management. Based on the foregoing, we are complying with the obligation to pay taxes in good faith in response to taxation agencies' principle of fair taxation, and are building a relationship of cooperative mutual trust with taxation agencies.

Transparent Disclosure

Hwashin makes transparent disclosures of major financial and taxation information that may affect the decision-making of various stakeholders through the digital disclosure system.

Ethical and Legal Compliance Management

Ethical and Compliance Management System

Hwashin will fulfill its roles and obligations as a trusted partner for customers and as a member of local communities, with all employees united under the values of human-centered management and participatory management open to all. Guided by the motto of putting good thoughts into the right actions, we will lead the era of intense global competition that has become our reality. Hwashin has, therefore, enacted ethics and compliance rules as a standard of action and value judgment applicable to all officers and staff for its employees' individual dignity, company reputation, and fairness in transactions with suppliers for a principled company culture. And we are resolved to put them into practice.

Basic Mindset of Hwashin Employees

Hwashin employees, being aware that their individual actions are connected to the company's reputation, must hold firm to the following principles for a healthy corporate culture and stronger internal and external credibility:

Basic Mindset of Hwashin Employees

1. In carrying out all duties, employees must always perform duties with fairness and transparency pursuant to lawful procedures.
2. Employees must not engage in any illegal or wrongful activity using superior authority or dominant position.
3. They must not seek any quid pro quo for intentional work delays.
4. They must be mutually courteous in performing duties.
5. They must be fair and honest in performing and reporting work.
6. Employees must protect the company's property and maintain strict security with information arising from transactions and company secrets acquired during work.
7. They must comply with national laws and Hwashin regulations in everyday life and duties, and engage in no immoral or unethical actions that may be socially censured.

Ethical and Compliance Conduct Guidelines

1. Prohibition of Illegal or Wrongful Personal Interest

No one may misuse one's position or authority related to work or seek the following interest from any internal or external stakeholder in violation of national laws or Hwashin's regulations (pecuniary interest, entertainment, concurrent employment as staff or an officer, the acquisition or guarantee of capital profits, the provision or receipt of conveniences, and other receipt of valuables not mentioned in the foregoing or actions amounting to such).

2. Prohibition of Wrongful Solicitation

No one may solicit the following actions from any internal or external stakeholder using a superior position or amicable relationship. (Solicitation or pressure that may be socially censured; private favors or commissions)

3. Prohibition of Illegal or Wrongful Use of Company Assets

No one may use the company's tangible or intangible asset or business information as follows for their own or any third party's private interest. (Personal use, assignment, or lease to a third party without company approval; the use of company budgets for personal use, expenditures at odds with company purposes, or false records in accounting ledgers; the use or unauthorized leakage of company information assets for profit)

4. Prohibition of Activities that Damage a Healthy Corporate Culture

No one may engage in the following activities that damage a healthy corporate culture. (Immoral actions that may violate human rights and harm the workplace atmosphere; discrimination for any cause)

5. Prohibition of Other Activities in Violation of Laws and Company Regulations

No one shall otherwise violate national laws or Hwashin regulations in everyday life or duties.

[illegible]

Compliance Management

Fair Trade Voluntary Compliance Program (CP)

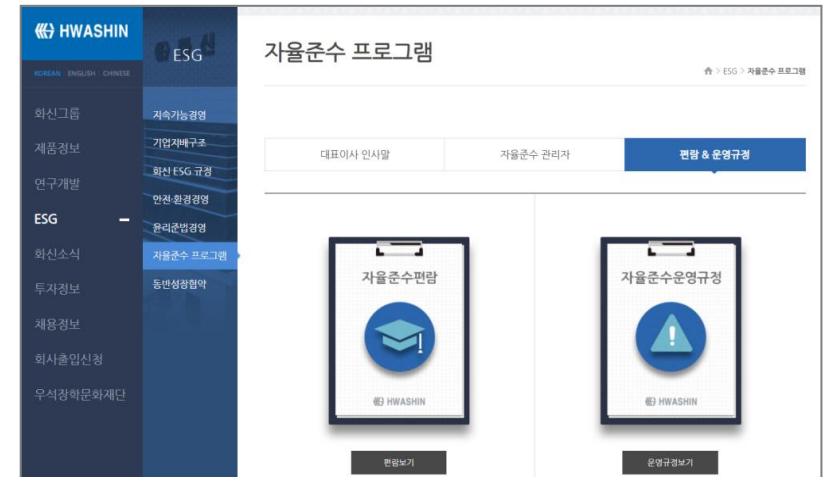

Since 2018, Hwashin has operated the Fair Trade Voluntary Compliance Program to promote fair and transparent market practices and legal compliance. The CP is an internal control system designed to help employees recognize fair trade regulations in advance and prevent potential violations. It outlines mandatory standards of conduct for employees, legal precautions, and procedures for voluntary compliance activities. Through CP, Hwashin aims to proactively prevent legal risks and foster ethical thinking and responsible decision-making across the organization. The company remains committed to continuously strengthening the effectiveness of CP, fostering a culture of autonomous compliance of fair trade, and achieving zero regulatory violations so that we may faithfully fulfill our role as an ethical and responsible corporate citizen.

CP Violation Reporting System

To enhance the effectiveness of CP, Hwashin operates an internal reporting system not only for follow-up responding to violations after their occurrence, but also for voluntarily preventing and detecting them at an early stage. The company has established a system that allows employees to directly report to the compliance manager at any time if they recognize an act that violates—or is likely to violate—fair trade laws or compliance standards. This approach reinforces a continuous monitoring framework. All reports are handled through procedures that strictly ensure confidentiality, and the principle of protection against retaliation is upheld to promote a culture of voluntary reporting. Hwashin will continue to improve the reporting system to prevent potential legal violations in advance and to help a voluntary compliance culture settle throughout the organization.

Eight Elements of CP

1. Establish and implement CP standards and procedures
2. Announce the top management's commitment and support for voluntary compliance
3. Designate (appoint) the autonomous compliance manager
4. Produce a voluntary compliance manual and distribute it to employees
5. Provide continuous and systematic compliance training
6. Establish an internal monitoring system
7. Discipline employees who violate fair trade laws and regulations
8. Evaluate program effectiveness and implement corrective measures

※ For details on Hwashin's voluntary compliance manual and operating regulations, please refer to the company website.

Operation of Educational Programs to Enhance Awareness of Fair Trade

Hwashin systematically conducts fair trade-related training each year to establish a fair and transparent subcontracting order and to promote shared growth with its suppliers. These training programs are provided not only to the relevant internal departments but also to partner companies. They comprehensively cover the basics of the Subcontracting Act of Korea, key regulations, and potential penalties for violations. Practical training materials are also distributed, incorporating current enforcement trends and real-world cases from the Fair Trade Commission of Korea. The training sessions include Q&A sessions with legal advisors to address participants' specific concerns and enhance their legal understanding. This helps raise voluntary compliance awareness regarding fair trade laws and fosters a culture of mutual trust and cooperation between Hwashin and its suppliers. Hwashin remains committed to continuously operating effective training programs to establish a fair trading culture and will do its utmost to strengthen healthy partnerships with its suppliers.

Pre-Review and Procurement Inspection System to Prevent Legal Violations

Hwashin has established and operates a compliance system focused on pre-review and internal inspections to ensure fair trading practices and prevent legal violation risks in advance. A "Voluntary Compliance Review Committee" meeting is held monthly, where the compliance manager, relevant department representatives, and a fair trade legal expert jointly review and assess matters such as supplier registration/cancellation criteria, contract procedures, and transaction disputes. This pre-approval process helps proactively prevent violations of the Fair Transactions in Subcontracting Act of Korea. Additionally, a "regular procurement audit" is conducted semiannually, involving related procurement departments. This audit includes a preliminary document investigation, checklist-based review, interviews with the responsible staff, and on-site inspections to assess compliance with the Fair Transactions in Subcontracting Act, the Monopoly Regulation and Fair Trade Act, company regulations, and other applicable laws from multiple angles. These activities are core to strengthening the organization's proactive response capabilities and compliance awareness. Going forward, Hwashin will continue to promote a transparent and accountable trading culture through proactive compliance management.

LRQA Independent Assurance Statement Relating to Hwashin Co., Ltd.'s GHG Emissions Inventory for the calendar years 2019, 2023 and 2024

This Assurance Statement has been prepared for Hwashin Co., Ltd. in accordance with our contract.

Terms of engagement

LRQA was commissioned by Hwashin Co., Ltd. to provide independent assurance on its GHG emissions inventory for the calendar years 2019, 2023 and 2024 (here after referred to as "the report") against the assurance criteria below to a limited level of assurance and materiality of 5% using ISO 14064-3:2019, 'Specification with guidance for verification and validation of greenhouse gas statements'.

Our assurance engagement covered the operations of Hwashin Co., Ltd.'s domestic sites¹ and its overseas subsidiaries, and specifically the following requirements:

- Evaluating conformance with World Resources Institute / World Business Council for Sustainable Development Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard, revised edition²
- Evaluating the accuracy and reliability of data and information for direct GHG emissions (Scope 1) and energy indirect GHG emissions (Scope 2).

The main activities of Hwashin Co., Ltd. include manufacturing of automotive parts and the GHG emissions have been consolidated using an operational control approach.

LRQA's responsibility is only to Hwashin Co., Ltd. LRQA disclaims any liability or responsibility to others as explained in the end footnote. Hwashin Co., Ltd.'s responsibility is for collecting, aggregating, analysing and presenting all the data and information within the report and for maintaining effective internal controls over the systems from which the report is derived. Ultimately, the report has been approved by, and remains the responsibility of Hwashin Co., Ltd.

LRQA's Opinion

Based on LRQA's approach nothing has come to our attention that would cause us to believe that Hwashin Co., Ltd. has not, in all material respects:

- Met the requirements above; and
- Disclosed accurate and reliable data and information as summarized in Table 1 ~ Table 3 below.

The opinion expressed is formed on the basis of a limited level of assurance and at the materiality of 5%.

Note: The extent of evidence-gathering for a limited assurance engagement is less than for a reasonable assurance engagement. Limited assurance engagements focus on aggregated data rather than physically checking source data at sites. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.

LRQA's approach

LRQA's assurance engagements are carried out in accordance with our verification procedure. The following tasks though were undertaken as part of the evidence gathering process for this assurance engagement:

- Interviewing key people of the organization responsible for managing GHG emissions data and records;

¹ Hwashin Co., Ltd.'s domestic subsidiaries were excluded from this assurance engagement.

² <https://www.ghgprotocol.org>

- Reviewing processes related to the control of GHG emissions data and records;
- Visiting the head office and reviewed additional evidence made available by Hwashin Co., Ltd.;
- Verifying historical GHG emissions data and records at an aggregated level for the calendar years 2019, 2023 and 2024; and
- Reviewing whether Hwashin Co., Ltd. reflected the Greenhouse Gas Management Manual for Hyundai Motor and Kia Suppliers (Ver. 1.0).

LRQA's standards, competence and independence

LRQA implements and maintains a comprehensive management system that meets accreditation requirements for ISO 14065 *Greenhouse gases – Requirements for greenhouse gas validation and verification bodies for use in accreditation or other forms of recognition* and ISO/IEC 17021 *Conformity assessment – Requirements for bodies providing audit and certification of management systems* that are at least as demanding as the requirements of the International Standard on Quality Control 1 and comply with the *Code of Ethics for Professional Accountants* issued by the International Ethics Standards Board for Accountants.

LRQA ensures the selection of appropriately qualified individuals based on their qualifications, training and experience. The outcome of all verification and certification assessments is then internally reviewed by senior management to ensure that the approach applied is rigorous and transparent.

This verification engagement is the only work undertaken by LRQA for Hwashin Co., Ltd. and as such does not compromise our independence or impartiality.

LRQA Group Limited, its affiliates and subsidiaries, and their respective officers, employees or agents are, individually and collectively, referred to in this clause as 'LRQA'. LRQA assumes no responsibility and shall not be liable to any person for any loss, damage or expense caused by reliance on the information or advice in this document or howsoever provided, unless that person has signed a contract with the relevant LRQA entity for the provision of this information or advice and in that case any responsibility or liability is exclusively on the terms and conditions set out in that contract.

The English version of this Assurance Statement is the only valid version. LRQA assumes no responsibility for versions translated into other languages.

This Assurance Statement is only valid when published with the Report to which it refers. It may only be reproduced in its entirety.

Appendix

LRQA Independent Assurance Statement Relating to Hwashin Co., Ltd.'s Sustainability Report for the calendar year 2024

This Assurance Statement has been prepared for Hwashin Co., Ltd. in accordance with our contract but is intended for the readers of this Report.

Terms of engagement

LRQA was commissioned by Hwashin Co., Ltd. (Hwashin abbreviated) to provide independent assurance on its 'Hwashin Sustainability Report 2024' ("the report") against the assurance criteria below to a moderate level of assurance and materiality of professional judgement using "Accountability's AA1000AS v3", where the scope was a Type 1 engagement.

- Our assurance engagement covered Hwashin's operations and activities in Korea and specifically the following requirements:
 - Evaluating adherence to the AA1000 AccountAbility Principles' of Inclusivity, Materiality, Responsiveness and Impact

Our assurance engagement excluded the data and information of Hwashin's suppliers, contractors and any third-parties mentioned in the report.

LRQA's responsibility is only to Hwashin. LRQA disclaims any liability or responsibility to others as explained in the end footnote. Hwashin's responsibility is for collecting, aggregating, analysing and presenting all the data and information within the report and for maintaining effective internal controls over the systems from which the report is derived. Ultimately, the report has been approved by, and remains the responsibility of Hwashin.

LRQA's Opinion

Based on LRQA's approach nothing has come to our attention that would cause us to believe that Hwashin has not, in all material respects:

- Met the requirements above
- Covered all the issues that are important to the stakeholders and readers of this report.

The opinion expressed is formed on the basis of a moderate level of assurance and at the materiality of the professional judgement of the verifier.

Note: The extent of evidence-gathering for a moderate assurance engagement is less than for a high assurance engagement. Moderate assurance engagements focus on aggregated data rather than physically checking source data at sites. Consequently, the level of assurance obtained in a moderate assurance engagement is substantially lower than the assurance that would have been obtained had a high assurance engagement been performed.

LRQA's approach

LRQA's assurance engagements are carried out in accordance with our verification procedure. The following tasks though were undertaken as part of the evidence gathering process for this assurance engagement:

- Assessing Hwashin's approach to stakeholder engagement to confirm that issues raised by stakeholders were captured correctly. We did this through reviewing documents and associated records.
- Reviewing Hwashin's process for identifying and determining material issues to confirm that the right issues were included in their Report. We did this by benchmarking reports written by Hwashin and its peers to ensure that sector specific issues were included for comparability. We also tested the filters used in determining material issues to evaluate whether Hwashin make informed business decisions that may create opportunities that contribute towards sustainable development.
- Reviewing additional evidence made available by Hwashin at its headquarters in Yeongcheon-si, Gyeongangbuk-do.

Observations

Further observations and findings, made during the assurance engagement, are:

- Inclusivity:
 - We are not aware of any key stakeholder groups that have been excluded from Hwashin's stakeholder engagement process.

² <https://www.accountability.org>

- Materiality:**
We are not aware of any material issues concerning Hwashin's sustainability performance that have been excluded from the report. It should be noted that Hwashin has established extensive criteria for determining which issue/aspect is material and that these criteria are not biased to the company's management.
- Responsiveness:**
Hwashin has declared their commitment to achieve carbon neutrality by 2050 and has established specific action plans up to 2030. To manage sustainability risks within its supply chain, Hwashin conducts ESG evaluations and incorporates the quantitative assessment results into its management decisions.
- Impact:**
Hwashin has established a Sustainability (ESG) Charter, approved by its management, to monitor and manage potential and actual outward impacts directly or indirectly related to business operations. In particular, it has adopted a Responsible Minerals Sourcing Policy and continuously improves its practices by incorporating and updating risks identified within its supply chain into this policy.

LRQA's standards, competence and independence

LRQA implements and maintains a comprehensive management system that meets accreditation requirements for ISO 14065 Greenhouse gases – Requirements for greenhouse gas validation and verification bodies for use in accreditation or other forms of recognition and ISO/IEC 17021 Conformity assessment – Requirements for bodies providing audit and certification of management systems that are at least as demanding as the requirements of the International Standard on Quality Control 1 and comply with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants.

LRQA ensures the selection of appropriately qualified individuals based on their qualifications, training and experience. The outcome of all verification and certification assessments is then internally reviewed by senior management to ensure that the approach applied is rigorous and transparent.

LRQA is Hwashin's verification body for its GHG emissions. The verification is the only work undertaken by LRQA for Hwashin and as such does not compromise our independence or impartiality.

LRQA Group Limited, its affiliates and subsidiaries, and their respective officers, employees or agents are, individually and collectively, referred to in this clause as "LRQA". LRQA assumes no responsibility and shall not be liable to any person for any loss, damage or expense caused by reliance on the information or advice in this document or howsoever provided, unless that person has signed a contract with the relevant LRQA entity for the provision of this information or advice and in that case any responsibility or liability is exclusively on the terms and conditions set out in that contract.

The English version of this Assurance Statement is the only valid version. LRQA assumes no responsibility for versions translated into other languages.

This Assurance Statement is only valid when published with the Report to which it refers. It may only be reproduced in its entirety.
